## LEHIGH UNIVERSITY

Founded here in 1865 by the Hon. Asa Packer, one of the country's early industrialists and philanthropists, and chartered in 1866 by the Commonwealth, Lehigh soon became a leader in combining the study of liberal arts with technical and scientific education.

# A UNIVERSITY IN TRANSITION

## An Editor's Guide to

Like faded snapshots from an old picture album, the photographs of "traditional Lehigh" appearing on the preceding pages are faint reminders of a distant past. The activities represented in the pictures, however, such things as athletics, Mustard and Cheese and band, and the things portrayed, professors, students, trees and dogs, are still central to the Lehigh of 1973.

Lehigh in 1973 is a university in transition. An all-male tradition has been rejected as archaic; beautiful, old buildings have become outmoded facilities; an obsessive concern with engineering has been recognized as unbalanced. Yet, the basic concerns of administrators, faculty and students have changed very little over the years.

While the late 1960's saw the University's first massive, modern building program, the 1970's will see an even more massive program at a time when space in the University's central campus is dwindling. While the late 1960's required the University to react to changing political demands in the country and world, the 1970's will require the University to react to ongoing educational, technological, and social upheavals—upheavals that may have infinitely more impact on Lehigh than have earlier ones. How or even whether the University can retain its positive traditional aspects in the face of rapid change will be an imminent concern.

The 1973 Epitome both reflects and reflects on the notion of a university in transition. While recognizing the traditional role of the yearbook, the Epitome staff believed that no record of the year at Lehigh would be meaningful without an attempt to explain just where we were in that year. In other words, we tried to make the 1973 Epitome a year"book" and not just a year"catalogue" of names and faces, without sacrificing the names and faces.

## TRADITION

Accordingly, the theme of a university in transition runs throughout the book. The traditional Lehigh aside from its indirect influence on the present Lehigh is given specific attention in the photo essay on page 1-17 and in a special 16-page section on the Linderman Library beginning on page 154. Both sections were photographed by associate editor Goodloe Suttler, and supplemented by old pictures from library files.

## LEHIGH IN 2000

At the other end of the time line, "future" editor Steve Glickstein has put together a section on Lehigh in the year 2000 (p. 314). Admittedly speculative, the section was put together by Steve after extensive pri-

# the 1973 Epitome

vate interviews with Lehigh's administrators and faculty members involved in planning. While we will have to wait 27 years to see how close the predictions come to reality, we couldn't wait that long for photographs. Accordingly, Steve relied on the work of artists Hal Lambert, Gene Mater, Dave Shelbo, Tim Haas and photographer Bob Batcheler.

## THE PRESENT

The rest of the book is devoted specifically to the Lehigh of 1973, and is divided into four sections:

(1) "What Happened" provides a review of events which informed, entertained or otherwise enlightened Lehigh during the year. (p.22)

(2) "The Academic Aspect" covers the scholarly pursuits of the class of 1973 (p.68). Complementing the administration (p.72), senior and faculty (arranged by department—Business, p. 84; Arts and Science, p. 96; Engineering, p. 128) and group pictures (p. 150) are articles on graduation, the admission office and how it affects alumni (by Mike Duguid, p. 92) and on how the self-proclaimed "bastard" of the EE department, John Ondria, views the grading process. (p. 120).

(3) "Life at Lehigh" (p. 170) consists of living group pictures (fraternities p. 182; residence halls, p. 250) and two articles. Managing editor Mike Duguid tries to shed new light on the social problems raised during the past year in interviews with Deans Hurley and Quay while staff writer Mary Lou Rogers goes to Jim Duane and Dean Cambell for their definition of the role of the gryphon society.

## WHAT IS SPORT?

(4) Finally, sports editors Jim Wilmott and Bill Criqui augment the usual collection of team pictures and records with a photo essay revealing what they believe to be the true nature of sport (p. 276).

The senior directory begins on p. 362 following the advertisements (p. 348).

The 1973 Epitome makes no claims of completeness. As usual, certain individuals and groups have been slighted. This Epitome should be accepted as a true and honest attempt to describe Lehigh at a particular point in time. Your memory must fill in the gaps.

BOB GOLDICH  
EDITOR, 1973 EPITOME

## DEDICATION

Combining the intellectual ability and the acquisitive, yet reflective, nature of the scholar with the drive of the activist, Dr. Joseph A. Dowling, professor of history, has been a leader in the attempt to preserve the tradition of Lehigh while bringing the University into the modern era. It is thus fitting that this particular Epitome be dedicated to him.

Dr. Dowling's wide variety of interests (among them Lehigh's top two, drinking and sports) enable him to reach a good cross section of students. Specializing in American intellectual history, American radical movements, and the work of William Dean Howells, he heads Lehigh's American Studies program. At the same time, he is responsible for the general studies program for engineers.

In his 15 years at Lehigh, he has accumulated many honors. However, what really sets Dr. Dowling above others is his concern that his students mull over the ideas they study under him, not just memorize them. In and out of the classroom, he works to hone and refine their minds in order to prepare them for life in a complex age.

That is what education is all about.

# WHAT HAPPENED

Anybody who claims that there was nothing to do at Lehigh in the past year except drink, play cards, smoke, listen to music or study, was missing a lot. Even a brief look at the highlights indicates that what happened at Lehigh was quite a bit:

—If there is one aspect of campus life that co-education has affected most, it has to be the theatre. No longer does Mustard and Cheese have to search for plays with large male casts or import talent from Cedar Crest. Led by senior Celeste Varrichio, the coeds have participated in a tremendously growing dramatic program. Plays by M&C, the newly formed Student Directors' Forum, and others took place outdoors, in Neville Lounge, in the Chapel, in a balloon, and in the Bethlehem City Council chambers, as well as in Grace Hall.

—SAC Concert Committee chairman Tony Licata proved once and for all that Lehigh can support concerts big and small. The NY Rock Ensemble and the extremely well received Livingston Taylor (right) provided the big action in Grace Hall while Merle and Doc Watson led

the mini-concert program with a sellout performance in Packard Lab.

—The Globus, Blaustein, and Berman Series' again brought the University and community together for larger events.

—The Epiphany Movie Series moved into its third year.

—WLRN and WLVR went on the cable. Senior Jerry Long and his broadcasting crew broadcast the NCAA wrestling finals from Seattle, Washington.

—the campus TV station got off the ground, and "The Lehigh Dating Game" became its first hit show.

—the Waterhole series let faculty members expound on pet topics

—two crazy people danced all weekend to help raised money for libraries damaged by floods upstate.

—Jane Fonda showed up speechless

—Isaac Asimov predicted the future

—Ruby Dee discussed the role of the modern woman

And on and on and on . . .

# The Academic Aspect

Graduation—the culmination of four years of education. Serious business? Well, an ace Epitome staffer was able to capture the infamous "Kappa Sig papers" and photocopy them in the Linderman. They reveal that at least one senior found graduation somewhat less than a sobering experience:

"I got my first inkling about Lehigh graduations from my skin doctor. While he was examining me, we were making idle conversation and he asked me where I went to school. I said Lehigh and he said he had once graduated from Lehigh. He gave me a sly look as though there was more of the story forthcoming. I asked him to elaborate on the details and he told me that while attending a friend's graduation from Lehigh, he and his friend took in a few fraternity parties. The friend got so sick that he could not make it to commencement, so my doctor received his diploma instead.

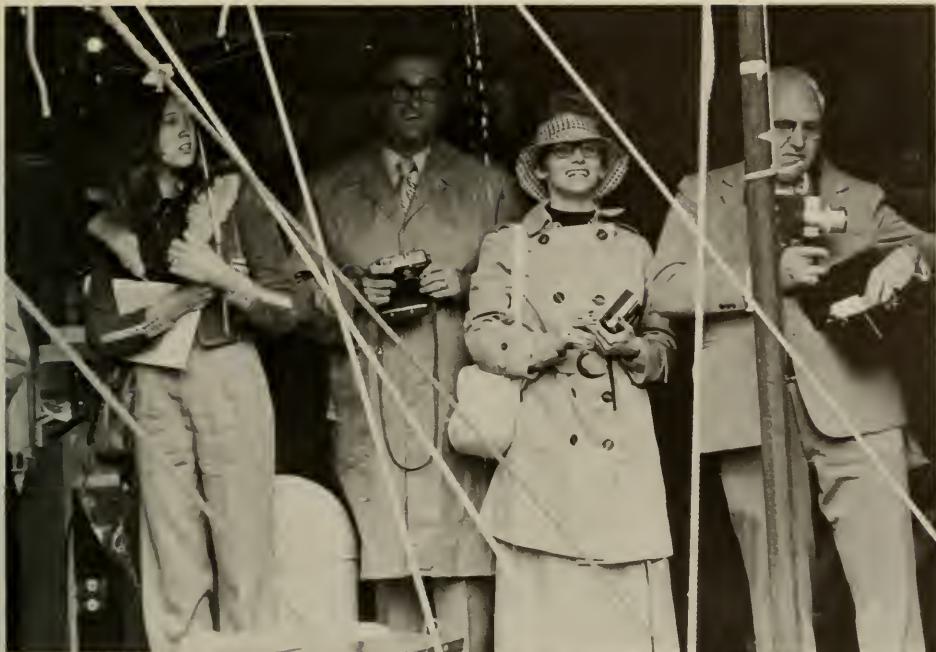

"Well, my doctor will be glad to know that graduation hasn't changed much. It is still marked by many episodes which brand it as strictly a Lehigh affair.

. . . Drinking Thursday nite until the wee hours of Friday morning . . . Sit around the tube Friday afternoon nursing a hangover and cursing ourselves for being so cheap as to disconnect the cable TV. Without it, only channel 6 comes in

. . . Decide to drink again Friday nite to kill hangover . . . Saturday morning, one guy's parents show up earlier than expected only to find him and his girl in the sack . . . More drinking Saturday nite. This time the parents join in . . . Two guys decide to wear pirate and gorilla masks to commencement. They were hardly even noticed. Who could see by Sunday . . . Sitting in Packard Lab Auditorium for 1 hour, passing hip flasks around. All the living groups sit together. Do all the Deltas have blond hair? . . . Mill around in newly renovated Lower Gym before moving to Big Top thru football tunnel. I always wanted to come running out that tunnel and I finally got a chance . . . After commencement and a few too many pictures, its over to the bookstore to return the gowns. Are they open? Who knows. After four years here, I still don't know bookstore hours or snack bar's either, for that matter . . . Dinner with the parents Sunday nite and more drinking . . . Sunday nite, more sitting around tube. Many are by now in a comatose state. However, some rally to have a marathon tails game with Phi Delt Prince and 23 . . . Getting horny so we shoot over to Moravian. Those girls have exams the next day so they shoot us down. I didn't want to go out with them anyway . . . Finally everybody falls asleep where they sit. Very few make it to bed. Not an unoccupied chair or couch in the house . . . Monday morning everyone took off and it was all over."

## Do You Remember This Place?

Most students have their first contact with Lehigh through the Admissions Office. One cannot help but be impressed by their work. Few, if any, schools in the East are as efficient in their admissions work. Requests are promptly fulfilled. Letters are quickly answered. The office staff is courteous and anxious to please. The interviews are pleasant and informative; the campus tours interesting. To application-wearied high school seniors, such a well-run organization is a blessing.

Once accepted by Lehigh, however, few students come into contact with the Admissions Office again. They might be in position to recommend a friend or relative, but these cases are few. The Admissions Office plays little or no part in the everyday life of a student at Lehigh.

Now that four years have drawn to a close, most people look back favorably on the time they spent here. Sure, we were all disgruntled as freshmen; who isn't? But Lehigh has been good to most. As alumni we will now begin to concern ourselves in a different way with Lehigh. A certain sense of pride will well up. We will have a stake in the future of Lehigh. We will want to know what kind of students are attending Lehigh. Are they the same quality of men and women who were there "back when we were freshmen?" Will admissions policies have to be changed because of the changing financial situation? Now that we are out of Lehigh, it is quite conceivable that the Admissions Office could enter our lives once again.

According to Samuel Missimer, Director of Admissions, policies have changed very little over the past decade. In

order to gain a fuller understanding of the admissions process, the *Epitome* talked to Missimer about admissions criteria.

In four years of associating with fellow students, one may have noticed certain basic qualities shared by all students, but there was such a wide variety of students present that no two people could be classified as exactly alike. How were they chosen? What does Lehigh look for in a high school senior as an indication that he would make an excellent addition to our student body?

The first and most obvious criteria is good grades. A wide range of values is considered, but at some point, the student must show that he has produced academically. Whether the academic record is a reflection of the intelligence of the student is another matter entirely. Some are overachievers, while some are underachievers. If a student has shown superior intellectual capability, this is taken into account with his grades.

Faced with the almost impossible task of evaluating such intangibles as intelligence quota and leadership, colleges have to rely some on the Educational Testing Service in Princeton, New Jersey to provide some aid. Since 1941, the SAT's and achievement tests have been the rulers to measure academic ability for admissions offices throughout the country, and Lehigh is no exception.

Missimer did have some reservations about the SAT's though. He said that the tests were developed to "test the strong points needed for college . . . math and English. They were designed to measure the potential of the stu-

... who can forget that first view of Lehigh . . . up the spiral staircase . . . look down that long corridor at the lady on the phone . . . the wait in the chair, accompanied by old yearbooks  
...

dent, but the pressure which builds up may shatter the nerves of the student and reduce the validity of the tests.

There have also been some complaints in the past few years that the SAT's rely too much upon the testee being from a certain type of environment, namely, middle class suburbia. This would put black students from the inner cities at a disadvantage. Some groups even attempted to create their own tests to prove that a smart suburban student could score poorly on a test keyed to an urban environment.

The effect of all this is to moderate the effects of the SAT

scores. They are no longer the absolute indicators that they once were. They do have one excellent side effect, however, said Missimer. Because most high schools adjust their grading practices to maintain a certain reputation, it is hard to tell how a student with a certain grade point average would measure up against past students. Standardized tests help provide a method of determining the quality of a high school.

In choosing students for Lehigh, the Admissions Office also considers participation in extracurricular activities. Membership in clubs, athletics and organizations is espe-

cially important in borderline cases. More impressive than membership in a lot of organizations is leadership in a few. Missimer said that what a student lacks in academic qualifications might be made up by leadership ability. The University has quite a few organizations, which exist not only for the benefit of student, but also to make Lehigh a well-rounded university rather than a technical school. Such groups include L.U.V., the glee club, and the band.

While it might appear that after some time one could become rather adept at judging who will make a successful Lehigh man using these criteria, it would seem that a male-oriented Admissions Office would find itself in a whole new ball game with coeducation. This is not so, said Missimer. The only difference that he has found in the admissions procedure is that "the girls are more pleasant to look at."

The qualifications of the women who apply to Lehigh are just as impressive as those men, if not more so. To a male population used to having women on campus only during the weekend, this revelation might come as quite a shock. When Lafayette went coed and the Brown and White reported that the average SAT's of the women were considerably higher than those of the men, there were some amazed expressions on campus.

Applicants at Lehigh are judged on their qualifications, not their sex. The only limiting factor is dorm space. Lehigh can only take in as many women as it has housing for.

Coeducation has definitely helped Lehigh increase its number of applications. One of

---

... the interviewer behind the desk smiling to put you at ease . . . checks your record . . . well, there should be no problem. . .

---

the reasons the trustees voted to make the University coed was because the number of applications was falling off. On top of that, students who were offered admission and refused, often did so because Lehigh was all male. Now with a new supply of students available, and the old supply encouraged by the addition of the new one, Missimer states that Lehigh's enrollment has gone up three per cent while colleges nationwide have experienced a drop. Thus, Lehigh has weathered the storm.

Of course, this statistic is somewhat misleading. The addition of coeds has naturally

caused an increase in enrollment. The real question is whether the increase will be maintained after the male-female ratio stabilizes.

The situation is complicated by the fact that many parents are finding it increasingly hard to finance their children's educations at private institutions. Lehigh is already committed to a \$200 increase in tuition annually until 1980. If enrollment is to be maintained at current levels, Lehigh might be forced to admit students of relatively inferior qualifications whose parents are willing to foot the bill. If enrollment could not be maintained at current levels, tuition might have to be raised even more, and the problem would

be intensified.

Yet, day-after day, year after year, the admissions process goes on. Missimer is proud of the fact that little has changed, but maybe some of these factors will force necessary change. It is the alumni who must demand to hear the facts and force the changes.

Who knows? One day, many years from now, you might return to the Admissions Office for another visit with a son or daughter seeking entrance at Lehigh. Only by keeping in touch with the admissions process will you know for sure if the University is the same place it was when you went here. A university is only as good as the students it attracts.

## The ABC's of Grading

Though most students tend to look at the grading process from one point of view, it's a nightmare for professors and students alike.

In order to provide an evaluation of a student's knowledge of the course material, the teacher must issue letter grades. But how much does that letter reflect what the student learned in the course? Does learning consist solely of memorizing facts and spitting them back on tests, or is there some other kind of learning taking place in the class room?

Naturally, motivation enters into the picture. A student taking a course in his major will have a different attitude than the student taking the same course as a distribution requirement or another exploring a field looking for an interest. As a result, students place more or less emphasis on a course depending on its usefulness to them.

The question is: How does a professor take these things into account in his grading system?

From the anguished cries of students, you'd think that some professors take delight in giving hard tests and then basing grades solely on the results. Such professors are seen as totally unsympathetic to any extenuating circumstances which might affect a student's grades.

To get the side of the story that's rarely told, the Epitome talked to Dr. John Ondria of the EE Department, a man who seems to attract his share of flak from students.

Ondria did not waste any time getting to the point. Only recently he had met with several of the junior EE's at an EE forum meeting regarding the content of EE 105.

"The students felt that my course entailed more work than all their other courses combined—and they were probably right. I'll tell you why it's so tough. It's a four-credit course with a lab and it really represents their first application of engineering. They begin to tie in theory with practice and that's never an easy thing to do. You cannot really teach it. It must be learned as you go along. So I tried to tell them that no matter who taught that course it would be a difficult course. The guy who came before me was the bastard of our department. Now I'm the bastard of our department."

Ondria teaches both junior and senior level courses, and grades them differently. At the junior level he stresses learning the basic concepts.

"I grade on the basis of students reaching a certain level of proficiency in the basic concepts of the course. This is really important in the earlier stages because the next course they take is directly dependent on this one. So they have to reach a certain level of proficiency or we're merely kidding them. The student is the one who ultimately loses out. If he doesn't get enough information before he moves on to the next subject, he'll slip back a notch, then he'll slip back two

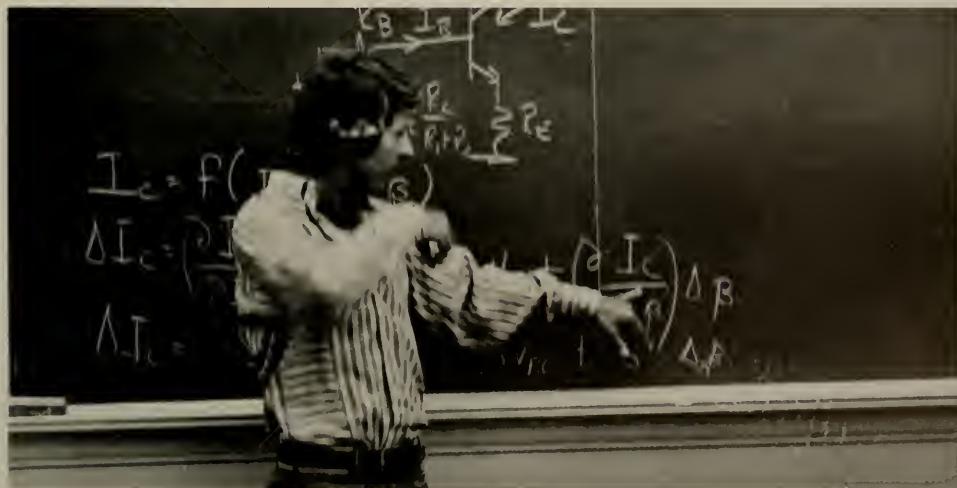

notches. It's not a linear progression but rather an exponential one. So it is important to establish this ground work.

"To get these first semester juniors off on the right foot, I demand attendance for the first month of class. I believe that a first semester junior starting off with his first course in EE ought to come in and find out what it is we're going to be talking about. So I tell my students, 'I want you to come to class, you must come. I will take attendance and you can miss only three days. OK!'

"Now then, that one month expires just about the time I give the first hour quiz. That quiz tells me if a student is on board or not. If he does an excellent job on the first hour quiz, he never has to come to class again. I lift that restriction.

"The guy who came before me was the bastard of our department. Now I'm the bastard of our department."

—Prof. John Ondria

"Students are all the same. They not only like to be known by their last name, but also by their first name. They want to be treated as individuals and I agree with them."

—Prof. John Ondria

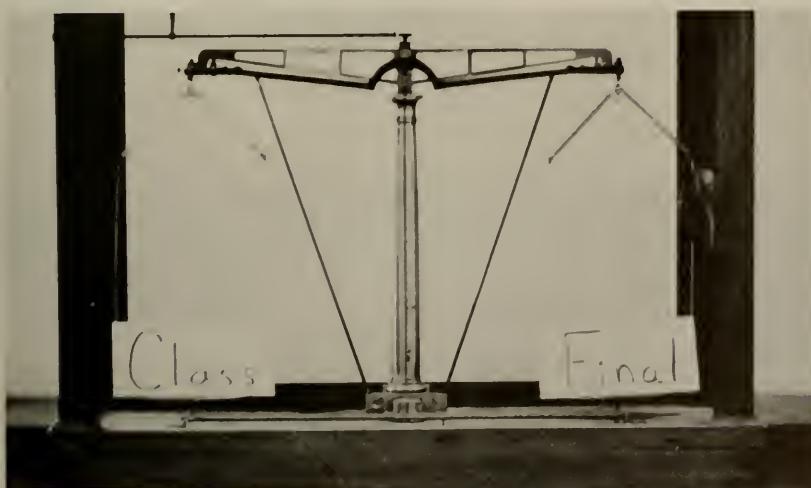

"However, if he turns around and does poorly on the second hour quiz, he'd better show up or he's going to wind up way down on the bottom of the class or he's going to be back with me next year.

"It's a pressure tool, I admit it, but I think a student needs it in the beginning. Then he knows himself whether he can miss class or not. If he does well on the quizzes, that means he understands the material. If he can read the book on the outside and grasp the concepts why should he have to come to class and listen to me hash it out all over again.

"Required attendance is also a good way to get to know students. Students are all the same. They not only like to be known by their last name, but also by their first name. They want to be treated as individuals and I agree with them. Well, I teach about 150 students a year and I have a horrendous memory for names. The only way I'm going to get to know students is by seeing them in class. On the other hand, if a guy never comes to class, you can bet I'll get to know him real quick."

Like all professors, Ondria has his own pet recipe for grade determination. He claims that it is designed to give all students the benefit of the doubt. One can hardly argue with him.

"I give three hour quizzes and a succession of short quizzes, announced and unannounced.

These, totaled up, constitute another hour quiz. The lowest of the four is then dropped. The lab is then averaged in as another hour quiz and this determines the student's class grade. That's what he takes on his back into the final. Now, the final is something else again.

"I look at the final this way: A guy can be missing the big picture all the way along during the semester. However, in the final exam, he puts all the pieces together and pulls a 95. Should I average this in equally with the class grade? Hell, no! The object is to get the information that the course has to offer, and it doesn't matter when he gets it, as long as he does.

"So, I argue this way: If a guy does well during the semester, I ought to recognize that he did well. If a guy did poorly during the semester but he tried (noticed, tried) and finally pulled it together on the final, I ought to recognize that also. If a guy did well during the semester, he usually will do well on the final. However, suppose he gets sick, which does happen, and he does poorly on his final. He should not be punished because of something he could not control.

"Finally, it comes down to this, and this is somewhat arbitrary, but somewhere alone the line you have to come down to a certain set of numbers: A student is shooting for two marks, a class mark and a final mark. I look at these two marks and say that the highest mark is 65%. The lowest is then worth 35%. Now how the hell can a student goof up with a grading system like that? But he does. Some still do".

The seniors receive remarkably different treatment from Ondria, however. His attitudes on teaching methods and grading systems for them are distinct.

Why the difference?

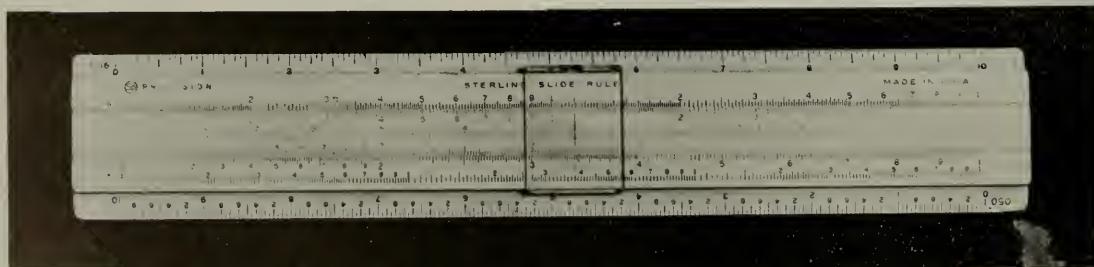

"Oh, it's very simple. I can tell a senior, 'look, I'm

---

"Occasionally, to get an idea across to a student who has obviously missed the point, I'll cross out the 75 and give him an 85 and say, 'Now explain to me what it is I asked you.' He invariably goes away with a 75."

—Prof. John Ondria

---

Every good slide rule should include . . .

going to give you a test today on something that I know you don't quite understand.' A senior will grasp the meaning of that, but a junior will not. A junior will sit there and say 'Well why the hell test me on something I don't know'. I cannot make him believe that he will not suffer if he loses a few points.

"The damn juniors are so concerned about gathering up points. If a kid got a 75 and he thinks he should have gotten a 79, he'll come in here and argue until he's blue in the face about those lousy four points. It would be better if he understood why he lost the points. Occasionally, to get an idea across to a student who has obviously missed the point, I'll cross out the 75 and give him an 85 and say, 'now explain to me what it is I asked you.' He invariably goes away with a 75.

"It isn't until the senior year that the student realizes

---

"I can tell a senior, 'Look, I'm going to give you a test today on something that I know you don't quite understand.' A senior will grasp the meaning of that, but a junior will not. A junior will sit there and say 'Well why the hell test me on something I don't know'.

—Prof. John Ondria

---

that a few measly points aren't worth haggling about. If anybody should be worrying about points, you would think a senior would, what with interviews coming up and all. But the senior has de-emphasized grades because he's been told often enough in the past that it is more important to understand what's going on. The grade will come automatically. So, because he's de-emphasized grading, I can de-emphasize it, too".

Ondria had mixed feelings about the use of grades as a motivation factor. He said that a student who works hard and gets a good mark, he argues will work harder still.

However, he also noted that undue stress on grades can be detrimental, because some people become more concerned with the grade than with learning the material.

"The grade a student received and what he got out of a course don't always go hand in hand. A lot of guys who can memorize like hell and get a good grade by default, never really understand what's going on.

"I usually try to de-emphasize that type of thing by making books available in my tests. I tell my students, 'if it is closed book, it's closed book for a reason. However, any formula you want, I will give you.' Sometimes students page violently through the book looking for something which they could, in two lines, work out for themselves.

"I've caught students cheating with formula sheets. One guy had every damn formula that he was afraid would be on the test written down. He didn't believe that I would give them to him.

"How did I catch him? The note was beautifully designed to slip up his shirt cuff. However, he got so ner-

$$V = iR$$
$$V_{AB} = \frac{W_{AB}}{q}$$
$$I = \frac{q}{\tau} = \frac{SE \cdot dA}{\tau E \cdot dl}$$
$$\frac{1}{R_p} = \frac{1}{R_1} + \frac{1}{R_2}$$

... a flat back.

vous that he turned it in with the quiz. When I opened the test booklet, it fell out in my lap. Now, if that man is so dumb that he has to cheat, for one, and then he turned that cheat sheet into me, he deserves to get his ass in a sling.

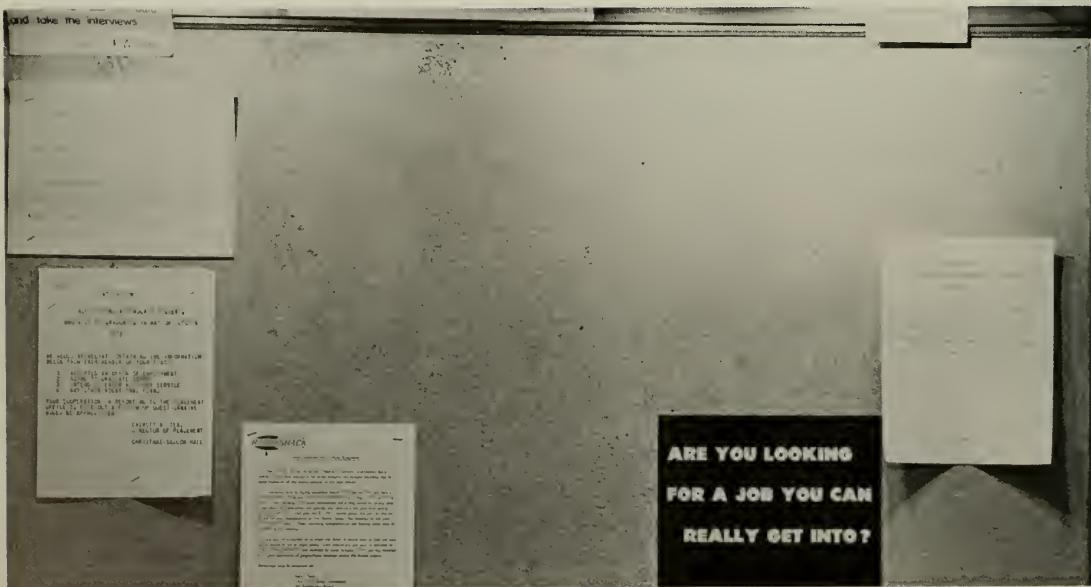

"This particular student is long gone from Lehigh, but I think this illustrates an important point; that a student's life here is not one of memorizing facts. He ought to dig into what he's studying and see why he's studying it rather than depend on formulas."

To the student seeking a job, this advice, may not prove too comforting. However, Ondria doesn't feel companies and graduate schools should be the cause of undue pressure.

"With the exception of a very few, most companies do not have a fine dividing line which says that if you are above this grade we will look at you and if you are below it we will forget about you. Most companies consider a broad range of grade levels, because once you're out in the business world for six months, you know where your grades are? Left behind in the registrar's office."

However, some students are pre-screened out of an interview on the basic of class rank, and never get the chance to sell themselves. In that case, Ondria says, you wouldn't want to work for such companies anyway.

"There's a lot of bullshit about having to get a 3.0 or whatever for a company to consider you. Initially,

---

"There's a lot of bullshit about having to get a 3.0 or whatever for a company to consider you. Initially, that's partially true, but it doesn't last long."

---

—Prof. John Ondria

---

that's partially true, but it doesn't last long. Furthermore, the interviews are set up in such a way that a guy does not just look at the marks. If he does, he's a fool."

Ondria says that most students, even if they start out on the wrong track, will get straightened out shortly. Very few people, he argues, actually get stuck by the system.

"There is some injustice in the system, but it is not as broad as some people believe it to be. This doesn't mean that you can sit on your ass and not do anything because later you can make it up. I didn't mean that at all. A guy who's goofing off for three or four years is never going to make it up. The average guy may goof off a little but once he realizes that there is no time to make up what he's lost, then there's no problem. He will invariably make the grade and that's what we're really interested in."

# THE LINDERMAN

The Linderman Library is the true center of Lehigh University. Built in 1877 by Asa Packer as a memorial to his daughter Lucy, it stands in the middle of the academic campus. Covered by ivy, it fits the stereotype of a traditional university structure. It is surrounded by Lehigh's oldest buildings, and on a tree just outside, students have been carving their initials for years.

The Linderman is also the intellectual center of Lehigh. It is the repository for all of the University's books dealing with the humanities and social sciences as well as a vast collection of periodicals, reference books and government documents. It houses the University's Rare Book Collection, and has provided office space for some of the University's leading scholars, including the late Lawrence Henry Gipson.

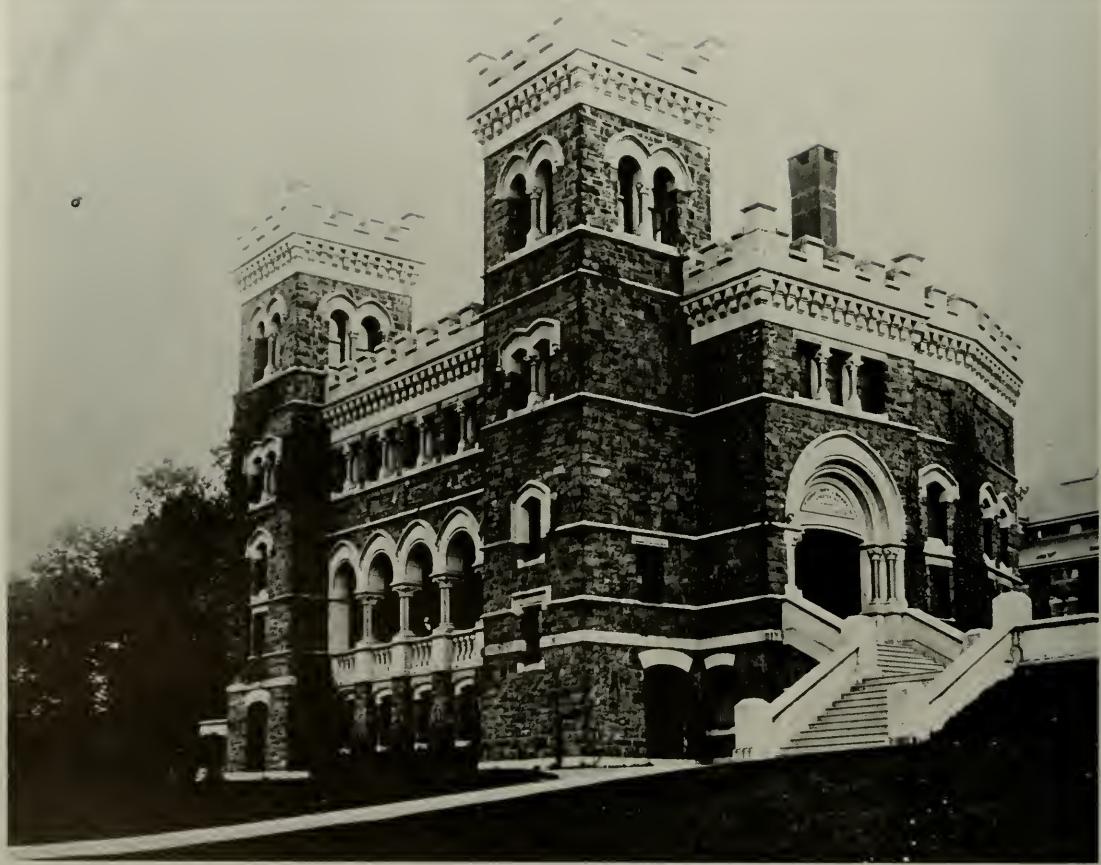

Of course, the Linderman is no paradise. Its antiquated ventilation system creates a permanently stuffy atmosphere. It is dank, dimly lit,

and dismal. Its creaky wooden floors often seem about to cave in under the weight of knowledge. Its stacks are overcrowded, and there is little room to work in them. Its holdings are constantly being diminished by thievery. For these and other reasons, many students avoid the Linderman like the plague.

Still, day after day, night after night, year after year, its tables fill up with students escaping the congenial living group atmosphere for solitary scholarship or to get ahold of that book which is always on two hour reserve.

It is true that many hours of sleep have been logged in the Linderman. It is true that a certain amount of socializing takes place there. It is true that the Linderman has become a hangout for Lehigh's girl watchers. But for all this, a stranger entering it for the first time would notice just one thing: under the watchful eye of the master tooler, Lehigh's tools are at it again.

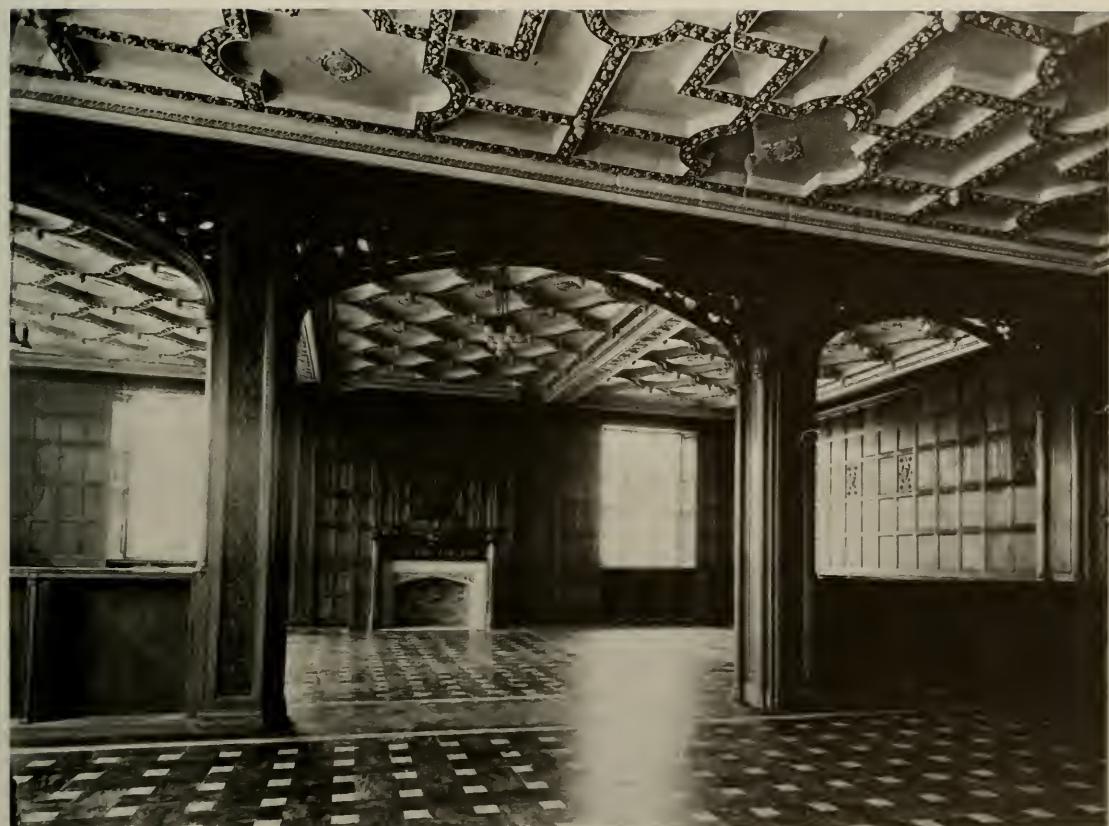

# LIFE AT LEHIGH

The novelty of coeducation has worn off. The coeds have shown themselves to be a highly adaptive lot, and today it seems as though they have always been here. Only the seniors can recall the days when the book store cashiers ringing up their register, and the library girls coffee-breaking in the snack bar, were the only females under 45 that a guy saw until Friday night.

For these upperclassmen, coeducation was the answer to a prayer. If it didn't completely solve everyone's weekend dating problems, at least it made the weekdays in class more tolerable.

For the incoming women, Lehigh would seem to present an ideal social environment: a ten to one ratio at a socially conscious university. Who could ask for more?

And yet, it was the coeds who first complained about the Lehigh social situation through Ruth Hurley, associate dean of students. Although not claiming to speak for all the coeds, Dean Hurley did point out that many of the coeds were dissatisfied with some of the attitudes and institutions of the men. This led to a

howl of protest in the Brown and White letter column and the formation of a student caucus on social life.

The caucus began with several of the 50 or so people meeting in Neville Lounge voicing their personal analyses of the problems with social life at Lehigh. Criticisms ran the gamut from "the Lehigh girls are snobs" to "the frat guys don't know how to treat women."

However, discussion quickly centered on one particular issue—whether or not the University should provide a student room with music piped in and food available, where students would have an opportunity to mix and meet other students, particularly of the opposite sex.

As this was the first positive action suggested, it was vigorously discussed and debated. It was on its way to becoming the only tangible result of an otherwise unfruitful caucus when one concerned young man, unhappy with this seemingly trivial solution, and anxious to ignite a fire under his fellow students, stood up and cried that only a one-to-one ratio would solve the social prob-

The Caucus on social life

lem at Lehigh, and that the students should force the administration to accept more women just as they had forced the administration to accept the first woman.

Well, there is no rallying cry among student activists quite like the suggestion that the administration is depriving the students of something which is rightfully theirs. With shouts of "springing Lehigh again" ringing through the air, most of the participants in the caucus got up and left. Result: a lot of hot air expelled and nothing accomplished.

Fortunately, it turned out that the students weren't the only ones giving Lehigh's social life considerable thought. The Office of Student Life, with whom social life is but one of many concerns, not only thought about the problem, but developed some concrete proposals and alternatives for change.

Two of the central figures involved in the planning, Deans William Quay and Ruth Hurley, were interviewed by the Epitome about their ideas on social life. Dean Quay provided an overview of the entire social outlook at Lehigh, while Dean Hurley, who started all the hubbub, concentrated on the women's views.

Dean Quay noted that the role of his office had changed over the years.

"Historically, this office used to have more specific responsibilities with regard to social life because the social life used to be much more structured. Students used to be required to petition for weekend parties and they had to register if alcoholic beverages were to be served. We also used to have the big fall and spring house parties for which the University hired resident chaperones. Now this has all been changed in that most of these regulations have been dropped.

"These days, we view this office as being in a supportive role, stimulating students to think about various forms of social life. We've done a lot to push for faculty pub nites and Friday afternoon happy hours. We also advise SAC on major weekend concerts and sign the contracts for these concerts. In addition, we are running a number of small concerts for the Neville Lounge series. For instance, we've sponsored Rich Mears a couple of times, and we've had Bill Alexander and his band in once or twice. This is in addition to Waterhole, the faculty discussion series. So we are making an effort to have more intimate social programs on the campus. This is especially to attract students who have no affiliation with a structured social group, be it the fraternities or some of the more socially-conscious residence halls."

This is not to say that the University is trying to develop a community social life with mandatory participation. There is

a good probability that most of the people who choose not to join a fraternity or to live in a socially-conscious residence hall do so specifically because they are not interested in a corporate social life with the various duties and responsibilities that it entails. This is the audience that the student life office aims for, and ideally it should include the freshmen who have no real facilities of their own.

"Most of the people we reach are primarily spectators, who just want to come and listen. They don't want to get involved in the workings of a social organization."

Dean Quay tries to keep his influence on social life subtle. He is anxious about being put in the role of a summer camp social director.

"I have grave misgivings about how far a University should get involved in social life. I don't think we should be in the position of supplying bread and running circuses."

---

"I have grave misgivings about how far a university should get involved in social life. I don't think we should be in the position of supplying bread and running circuses."

---

" . . . the women don't have a viable community yet. We don't have the fraternities system, we don't have intramurals to bring the women together as such."

—Dean Hurley

---

Dean Hurley, on the other hand, frequently finds herself the ringmaster of a veritable 3-ring circus. The range of problems which she handles is enormous. Steck calls to say that only four girls have signed up for intramurals; there are openings for two girls to attend a women's conference; a new female faculty member would like to meet some of the Women's Lib leaders in the area, "could a Sunday tea be arranged?"; Bob Moe, president of IFC, asks for suggestions on how the fraternities might get to know the women better; and on it goes.

At this early stage of coeducation, Dean Hurley simply cannot fade into the background. Until the women at Lehigh establish a corporate identity, she is their leader.

"I not only try to initiate ideas, but some things I actually have to do myself, because the women don't have a viable community yet. We don't have the fraternities system, we don't have intramurals to bring the women together as

such."

"I try not to be overpowering in this area because most of the learning experience comes from creating activities rather than sitting back and letting someone else do it."

"When will the women establish their community? I think in individual sections there's an identity coming along. We saw that first last year in Carothers with the Powder Puff football game. They were the first section to really jell as a viable group. I think this year it's pretty well centered in M&M."

"But as a political force, or as a social force on campus, it hasn't happened yet. And I think that kind of group identity is needed, if just for communication purposes. The women have no real group to communicate through as the men do in IFC or RHC."

When queried about the lack of a student room in the University Center, both deans said that though the U.C. did have some deficiencies, they had some thoughts on how to improve matters.

Dean Hurley addressed herself to the inadequacies of the snack bar.

"I just don't think that the snack bar is a student room. That art up on the walls, even though it is student art, is just horrible. One fella described that piece by the hallway entrance as a giant eye. Well, he was being charitable. It doesn't look like an eye at all."

Dean Hurley does think, however, that putting back the juke box will encourage more use of the snack bar.

Dean Quay also has some suggestions for improvement, but he is not altogether pleased by the return of the juke box.

"I myself find that that type of music can be an imposition rather than a panacea. People are always saying that pop music is the one thing that is going to bring people

Powder Puff football—first sign of women's community?

together. Well, I don't think the majority should dictate what everyone has to listen to. There should be something for everyone. If some people want the pop music, well fine, but it shouldn't be forced on everyone. For the benefit of the pop music fans, I've reinstated the juke box in the snack bar, but we've also ordered doors to go between the snack bar and Grace Lounge. For those people who want to do their own thing musically, Neville Lounge is available for live music. That is why the piano is there."

The controversy over the juke box began earlier in the year when some faculty members complained of the noise. Fearful that the juke box was discouraging the faculty from eating in the snack bar, Dean Quay had it removed. However, there was no sudden influx of faculty to the snack bar, and Dean Quay was forced to admit that the juke box had not been keeping them away. It was put back, and the search for ways of drawing students and faculty together began anew.

Interaction between faculty and students is one of Quay's uppermost goals. His definition of the purpose of the University Center reflects this.

"This is not a student union, it is a University Center. It is patterned after the models of such schools as Harvard, Yale, and Lafayette where they have felt that what is not needed on college campuses is another major building dedicated just to student use. It ought to be a building where faculty and students feel free to associate informally. When this building was conceived, the purpose in mind was this faculty-student interaction. Although we do have separate faculty and student dining rooms, we also have a great many areas that we hope are used by both. For instance, Neville

Lounge was constructed to get faculty and students together for discussion purposes."

Well, that accounts for the snack bar and Neville Lounge, but what about Grace Lounge? Just about everyone has, at one time or another, utilized Grace Lounge for a quiet mid-morning nap. But aside from its obvious somniferous atmosphere, what part does Grace Lounge play in the student-faculty interaction that Dean Quay envisions?

"We pictured Grace Lounge as more of a conversation place. However, it was very sterile. It reminded one of a railroad station waiting room. So we decided to make some renovations in there.

"For instance, we have already rearranged the furniture to create conversation areas around the room. Next, we would like to get rid of the fluorescent lighting which runs along the top of the lounge. It covers the entire length of the room and definitely gives the impression of a railroad station. We would like to take that out and replace it with some recessed lighting which is not as bright and doesn't give off as much of a glare. We'd also like to get some more table lamps."

"Maybe in the middle of the room, so that it doesn't look like such a long room, we could have a very, huge chandelier. Then, under that we could have a grouping of furniture with a rug around it to create a conversation grouping. The table that was in the middle is now in the corner so that if someone would like to study or play cards, they can do so in area of a little more intimacy. Overall, we think that with a very small outlay of money, we can make the room much more attractive and useful."

There is one example of a primarily student room operating in the U.C. at this time. The Organization for the Enhancement of Afroman

Student-faculty interaction—one of Dean Quay's major goals.

has a small room near Grace Lounge which seems to be a very popular gathering place with the black students on campus.

When asked to evaluate the success of the OEA room, Dean Quay replied that the room's potential had not been fully realized. Although the room has provided an environment for the black men and women on campus to meet and socialize, he said, it has not worked out as the cultural center that had been envisioned. He hesitated to draw any parallels between the OEA room and the student room suggested by the caucus on social life because of too many extenuating circumstances.

Dean Hurley likes the idea of a student room, but would like to utilize some facilities outside of the U.C. She ponders new uses of the Catacombs and possibly some unused residence hall lounges.

"We're starting a craft shop in M&M. Initially we're going to have ceramics and maybe some weaving. That might become a focal point for meeting people. Now I'm sure the residents of M&M don't want to give up all their lounge space, but maybe the residents of Taylor might

Elegant dining—another facet of the U.C.

contribute a lounge, too."

Getting to know the coeds seems to be the biggest stumbling block as far as men are concerned. Dean Hurley suggests that the men take the initiative in order that the Lehigh's whole social atmosphere be improved.

"If men are interested in meeting the women as fellow students and not just as date-bait, they ought to invite them to functions where they really can meet them, some time when the men don't have their own dates, when the women won't walk in and feel as though they're the fifth wheel.

"Now I don't mean to say that all women necessarily feel this way. Some women can go up to a weekend fraternity party in small groups and feel perfectly at home and that's fine. But it's easier to go, I think, when you know that you are expected and wanted up there. So often it's, 'oh, by the way we're having a party and if you've got nothing else to do . . . '

"So I suggested to the fraternities that they invite a section up for dinner and then count on spending a few moments with them, not just shoveling down the food and

The refurbished Grace lounge—no longer a "railway station"

running out of the room. After all, you can't get to meet any one that way. They should plan on spending some time after dinner, say three-quarters of an hour or so with their guests, either talking or listening to music or whatever. Don't just say 'we're having spaghetti and 12 of you come up' and 'oh hi' and 'how are you' and 'pass the parmesan cheese' and then get up and leave."

Dean Hurley also recommended activities as one of the best methods available to meet the women.

"If you're in an activity, then the two of you have something to talk about and your relationship will be on-going. I mean, you can sit in the snack bar from now until doomsday and the only on-going relationship you will develop will be with the women behind the counter."

With an eye on the Brown and White survey that found half of the Lehigh freshmen dissatisfied with their social life, Dean Hurley cites the improvement of the freshman's lot as one of her main goals for the future. She sees the establishment of a freshman camp as a step in the right direction.

"I think we need to get a freshman orientation program which is not specifically social in nature, but which includes

---

" . . . you can sit in the snack bar from now until doomsday and the only on-going relationship you will develop will be with the women behind the counter."

—Dean Hurley

---

social. From the very beginning, we would be getting students together quickly around academic concerns, around residence concerns, and around social concerns. We had a very successful freshman camp up at the University of New Hampshire and I think Lehigh lends itself to such an orientation program.

There is a spirit, a kind of ethic here at Lehigh. Right now it is very much a machismo ethic. For instance, you come here as a freshman and typically you live in the quad and you learn to rough it and bear through. You learn to study like hell during the week and get drunk on the weekend. You work together and you play intramurals together. Now this machismo thing carries over into everything we do and it doesn't necessarily have to be masculine. We have a core there that we could exploit in a positive way for the whole university. I'm not sure that learning to shout obscenities out the dorm window or throwing water balloons is positive, but that same kind of willingness to go along with your fellow students to become a part of a group could be channeled in a very positive way."

Thus it seems that the Office of Student Life is vitally active in the area of social life. Most of the short-range effects of coeducation upon Lehigh social life have been anticipated, and problems that have arisen have been ironed out or at least studied for possible solutions.

However, there are some long-range effects which are harder to foresee. Some of them may loom as the major problems of the future. For instance, what effect will the institution of coed dorms have on the number of freshmen who pledge fraternities each year?

Few people can dispute the fact that beer parties and women initially draw freshmen to the fraternities. The Greek system has a lot to offer besides girls and parties, but the frosh don't learn that until later. Fraternity parties are the easiest way to meet girls, and as long as that holds true, the frosh will continue to flock to the Hill.

This is important because the fraternity system continues to house approximately half of the upperclassmen. If coed dorms and on-campus apartments cause freshmen to lose interest in the Hill, some of the weaker fraternities might fold. What then? Initiate a residence hall and put them into a fraternity?

This worked well when Thornburg and Emery moved into Pi Lam and Tau Delt, but only because they had some group identity while still in the residence halls. Today, with the increasing integration of freshman and upperclassmen in all residence halls and the demise of residence hall selectivity, that group identity in the residence halls is being eroded. If the residence hall-becomes-fraternity system begins to break down, the University is left with a very expensive and very empty building.

The situation is only aggravated by the fact that coeds must be housed in the residence halls. Talk of sororities replacing fraternities is only in the very early stage.

The problem of the fraternities' survival is just one of many that might develop as the percentage of coeds increases. While the initial awkwardness which both upperclassmen and the first group of coeds felt has passed, many more problems will have to be solved before the University's goal of bringing men and women together in a natural atmosphere is met.

The years had progressed rapidly. With the 42nd closing of the Roosevelt Beer Garden at 3:52 A.M., the house felt relatively secure in its race for the title. The pledge class was advised to "speak glowingly of those who were better than they, even though they may have been turkeys." With this deep felt respect for one another the house went over to Bernardsville in hopes of washing away remembrances of our \$200 Christmas tree, but it was too crowded and the girl with the hips just blew everyones schwartzes. Jamie, Broccoli, Reeders, Dog and Joesta completed initiation in the "Bullit Memorial Disfigurement Club" and Gosser was admitted later with his face as evidence. Due to the strange and everlasting effects of Mung, a new utopia was installed in each and every one we left in Lauderdale. And places far or near will never be the same since we took a walk on the wild side.

When Lambda Chi Alpha moved to the hill, they left behind such archaic practices as hazing and pledging. The brothers and associate members of Lamdba Chi Alpha are now building a fraternity based on "honest friendship," ascribing to ideals of Truth, Honor, Morality, Patriotism, and Learning. Included in this process are:

studying  
eating  
Star Trek  
sing-along  
Christmas party  
pinball  
motorcycles  
old folks  
fraternity education  
cartoons  
rushing  
woo dog  
moving  
Easter egg hunt  
retreat  
helping others  
cleaning  
beer  
residency weeks  
shlong band  
new friends  
tobogganing  
tree climbing  
painting  
living

# Sigma Chi

We rough, we tough, we never wrong,  
On this planet, baby, ain't nobody as strong,  
Of all the houses that wear Greek letters,  
Sigma Chi's the greatest, it has no betters,  
Faithful Achates and Polyphemus,  
The Sigs are brothers, ain't nothin' between us,  
When it's time for you to take your last nap,  
First come to the Sigs, we're always on tap.

## Zeta Psi

(formerly known as Tau Delta Phi)

The sun again rose to start another beautiful day at Zeta Psi, prestigious local national fraternity. The dust had settled in the dining room after the great table, chair, and cereal throwing incident known as the Zmuda's restaurant milk-machine massacre and the culprits in the amazing Ham and Cheese heist were safely locked up. Most of "the House" was around, except for the Pizza Coma regular. Wilbur pondered the fate of his detachable gas tank while trees fell on Datsuns and Toyotas careened into chicken trucks. As Daddy Radio blasted in the background, the dildons (micro, macro, and quasi) busily separated their debits from their credits. Father Fawls whipped up a batch of his Butteeball pancakes to everyone's dismay, and the Gull retrieved from Pittsburgh after driving their for fun and profit, and proceeded to flush "the House Stuff" down the toilet. The Doktah filled out med school applications, while a 24-hour

Tull concert raged down the hall. Late in the afternoon, people headed for Plasticville to get some "nourishment" and everyone was psyched for "the House" meeting. The K got rid of his 7th date of the weekend just in time. At the meeting, important questions were posed: What are the walls made of? What does an intercom do? and What kind of furnace do we have? "The House" was forced to decide among Plan A, Plan B, and Plan C. Afterwards, the Sophomores were tucked into bed (while visions of sugarplums danced in their heads) and the Seniors headed for the Ho to get balithered. Buzz remarked that he was the President to the pledges and then set out for other places. Late in evening, not a creature was stirring, except for a sleepwalking steward, a nuerotic English major, a chickenhawk, and a bagadonutz. The thought on everyone's mind was: "Will Ruth show up tomorrow?"

## Why Gryphons?

"Caring" is the word that Clarence B. Campbell, Dean of Residence, uses to describe Lehigh University's Gryphon Society and the motives behind its work. "Concerned" is former Gryphon president Jim Duane's word to describe the society's members.

In separate interviews, each attempted to describe the basic qualities required of a student who participates in the University's counseling program.

The Gryphon Society's members serve as counselors to freshmen, keeping academic records to help spot problems, and they are responsible for any residence hall paperwork that might come along, such as damage reports. Both Campbell and Duane are quick to point out, however, that the actual scope of gryphon duty goes far beyond these functions, which many students think are the extent of gryphon work.

"It is a popular misconception that the society is a problem-solving organization," says Duane. In reality, he says, it is a group of people who help others adapt to the college experience, making it as pleasant and beneficiary as possible. People seem to see the gryphon's job as one of trouble-shooter for freshman problems, but for Duane this is only a small part of the job. The gryphon is not only advisor, but also friend to the student.

One area in which a gryphon can make a significant contribution is in the social life of his floor. Duane, for example, took his section of freshman on a picnic with a group of freshman women from another dorm. At no cost to the stu-

dents (the dining service provided the meal), the men were able to meet coeds in a good atmosphere, and on a friendship, instead of a date basis. Duane sees such activities as vitally important for all students, but especially for the men in providing an alternative social program to that of the fraternity. For many men, Duane pointed out, there is no alternative to the fraternity.

According to Duane, while the fraternities provide escape from the residence system and the best social opportunities for meeting coeds, for many, the system creates a good deal of anxiety. It becomes a social stigma not to be accepted by a fraternity, or not to be accepted by the fraternity of one's choice. By providing social activities, the gryphons can give a freshman new opportunities for an active social life outside of band parties, says Duane.

Where problems do occur, they are usually quite minor, says Dean Campbell. The adjustment to college life and life away from home, roommate problems, and academic difficulties are the most common freshman problems that a gryphon has to deal with. However, says Campbell, a gryphon must be prepared for anything, because he can and does run into any problem that faces the college student today—drugs, depression, and a whole range of other major problems. These, however, are very rare, Campbell points out.

As in other years, the gryphons came under attack last year for their "uselessness." In an effort to try and inform the campus about what they were doing, the gryphons held a public panel discussion.

Jim Duane

Clarence B. Campbell

One of the aids which gryphons use not only to deal with such problems, but also to prevent them is the academic record which gryphons keep for each freshman on their floor. Many students have questioned the purpose of these records, and indeed, Campbell says, some of the gryphons are not too clear as to their purpose either. However, he adds both groups are catching on to the idea. The gryphons, in keeping these records, are not as much concerned with the actual grades as with any problems they might indicate. Campbell explained that if a gryphon sees that a student is having academic difficulties, he is required to see to it that the student is made aware of the various tutoring programs available to him, and that he is encouraged to make use of them. The Gryphon Society itself sponsors a tutoring program. The records, says Campbell, are not the residence halls' attempt to keep track of freshman academics but are there to make better residence counselors out of the gryphons.

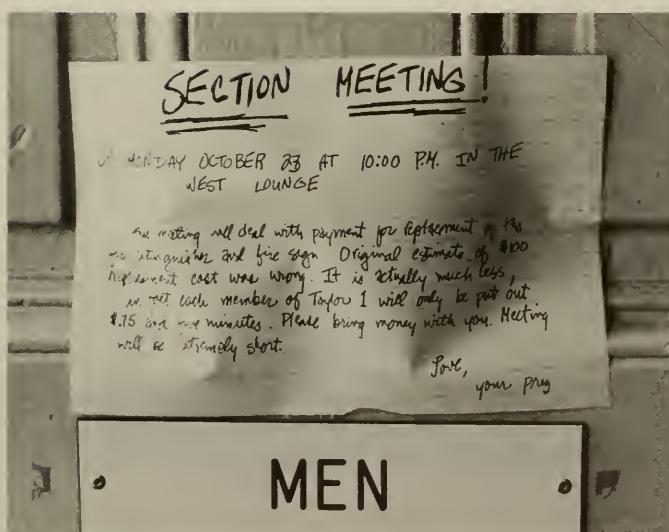

Discipline is one area of gryphon responsibility which many incoming freshmen sometimes resent. Both Campbell and Duane point out that discipline is usually handled by appealing to a student involved in a given situation on the basis of others' rights. For example, says Duane, if a student is the cause of some disruption, the gryphon tries to point out that other students living on the same floor are entitled to sleep, study, or whatever, and that he is interfering with their rights. According to Duane, this appeal almost always

works. He pointed out, however, that in extreme cases the gryphon can threaten to bring up a student on disciplinary charges. This last step is taken very rarely, though.

Handling discipline could be a problem if the society did not make every effort to select as gryphons students who are easily respected by other students. In the gryphon selection process, applicants are sent through several rounds of interviews with current members of the society. Several applicants are eliminated from consideration at the end of each round. Following some 20-30 interviews, the gryphons meet and make final recommendations for the remaining applicants. The final say goes to Dean Campbell, who has usually met all of the applicants.

Campbell and Duane both stressed as qualities they look for in potential gryphons, the ability to care and be interested in the individual, Lehigh University, and the gryphon society. Everyone is aware of the shortcomings in the selection process—personal bias, unstandardized questions, and the like—but Duane says the society works constantly on improving it. A great deal of time and energy is spent in the

Who can forget that ominous section meeting sign? What damages from that uproarious weekend must the section pay this time? In freshman sections, the gryphons handle such problems.

selection process, he says, in order to find students with the ability to function as a gryphon. A gryphon is expected to maintain a reasonable minimum grade point average, says Campbell. If a gryphon can't handle his academic work, he adds, he can't properly handle his gryphon duties.

The role of the gryphon doesn't seem likely to come in for any radical change in the near future, Campbell and Duane agree. Both see the proposed experiment in which a floor would go without a gryphon as a poor idea. They maintain that there is a definite need for gryphons for all freshmen.

Subtle changes have taken place, though, in recent years. The addition of coeds to the University has had its effect on the gryphons. Duane says the addition "broadened the scope" of the society, but has had little effect on the basic function of the gryphons. Coeds need help in almost the same capacities as the men, he says.

A more profound change, and one that is still taking place, has been the relationship between gryphons and up-

perclassmen, according to Duane. Before the advent of coeducation, freshmen were separated in the residence halls from upperclassmen, and a gryphon had to deal just with the freshmen. With integrated floors, the former freshman counselors, as the gryphons were called, are now becoming residence counselors, Dean Campbell points out. Duane sees a gryphon as a necessity for a well-integrated hall. Some upperclassmen may not want or need a gryphon, he says, but they should be there for those who do. A gryphon in an integrated hall must be one upperclassmen can respect, he added.

All in all, Duane says, "since I've been a gryphon (three years), the society has always attempted to improve life at Lehigh," through work with the faculty, the administration, and with other Lehigh student groups. Duane sees continuing improvement only through further interaction among these groups. Common interests, not working at odds with each other, will provide better life at Lehigh.

The quad—scene of many bizarre happenings.

How can words describe that which is indescribable? It was a year that started out with more water than the great flood, and it ended with a bang. Many unanswered questions fill our minds at year's end. Have Degen and Wengen ended their match battle? Will Laws ever open his mouth again? Will Sawchak ever shut his? Will Capt. John ever study again? Will Brand ever stop? Will the Austin return? Will Ferucci

ban the bomb? Will Helmus learn to play the trombone? Will Campanella ever lose his temper? Will Decker ride again? Will Spud sell his stereo (again)? And by the way, what ever happened to those mice in the study room, the pigeon on the door and the wimps all around us? For the answers to these and other questions, be back again next year.

# SPORT

Each weekend of the fall, winter and spring, and often during the week itself, a spectacle takes place at Lehigh, which, like a Shakesperean play or a Beethoven symphony, requires the ultimate in precession to achieve perfection.

Just as all mankind, regardless of background, can admire a symphony played by a top orchestra, so can it appreciate a stellar performance on the athletic field. What can surpass the beauty of a graceful swan dive? What thrill can top the

completion of a successful pole vault or pinpoint pass? What can match the effort of the individual reaching for a little extra to achieve the victory he covets.

However, while we all applaud the effort before us, we often fail to recognize the preparation, emotion, and sacrifice required of the athlete who like any performer seeks the best for himself, for those who depend on him, and for those who support him.

Let us ask, what is sport?

# LEHIGH IN 2000

This yearbook can accomplish what no machine, whatever its complexity can do. This book can transcend the bounds of time; a machine remains the prisoner of the present.

Lehigh now stands at an exciting and crucial juncture in its history. Never have the opportunities for innovation and development been so great; never have the corresponding dangers been so real.

The policies and planning which Lehigh pursues today will have a lasting effect on our posterity at this University. It is therefore very important that the ultimate consequences of today's actions be very carefully scrutinized. Though the long range destination seems very far away, the course Lehigh charts over the next 27 years is in many ways irreversible.

Planning is, of course, made more difficult by the impossibility of predicting the future with any

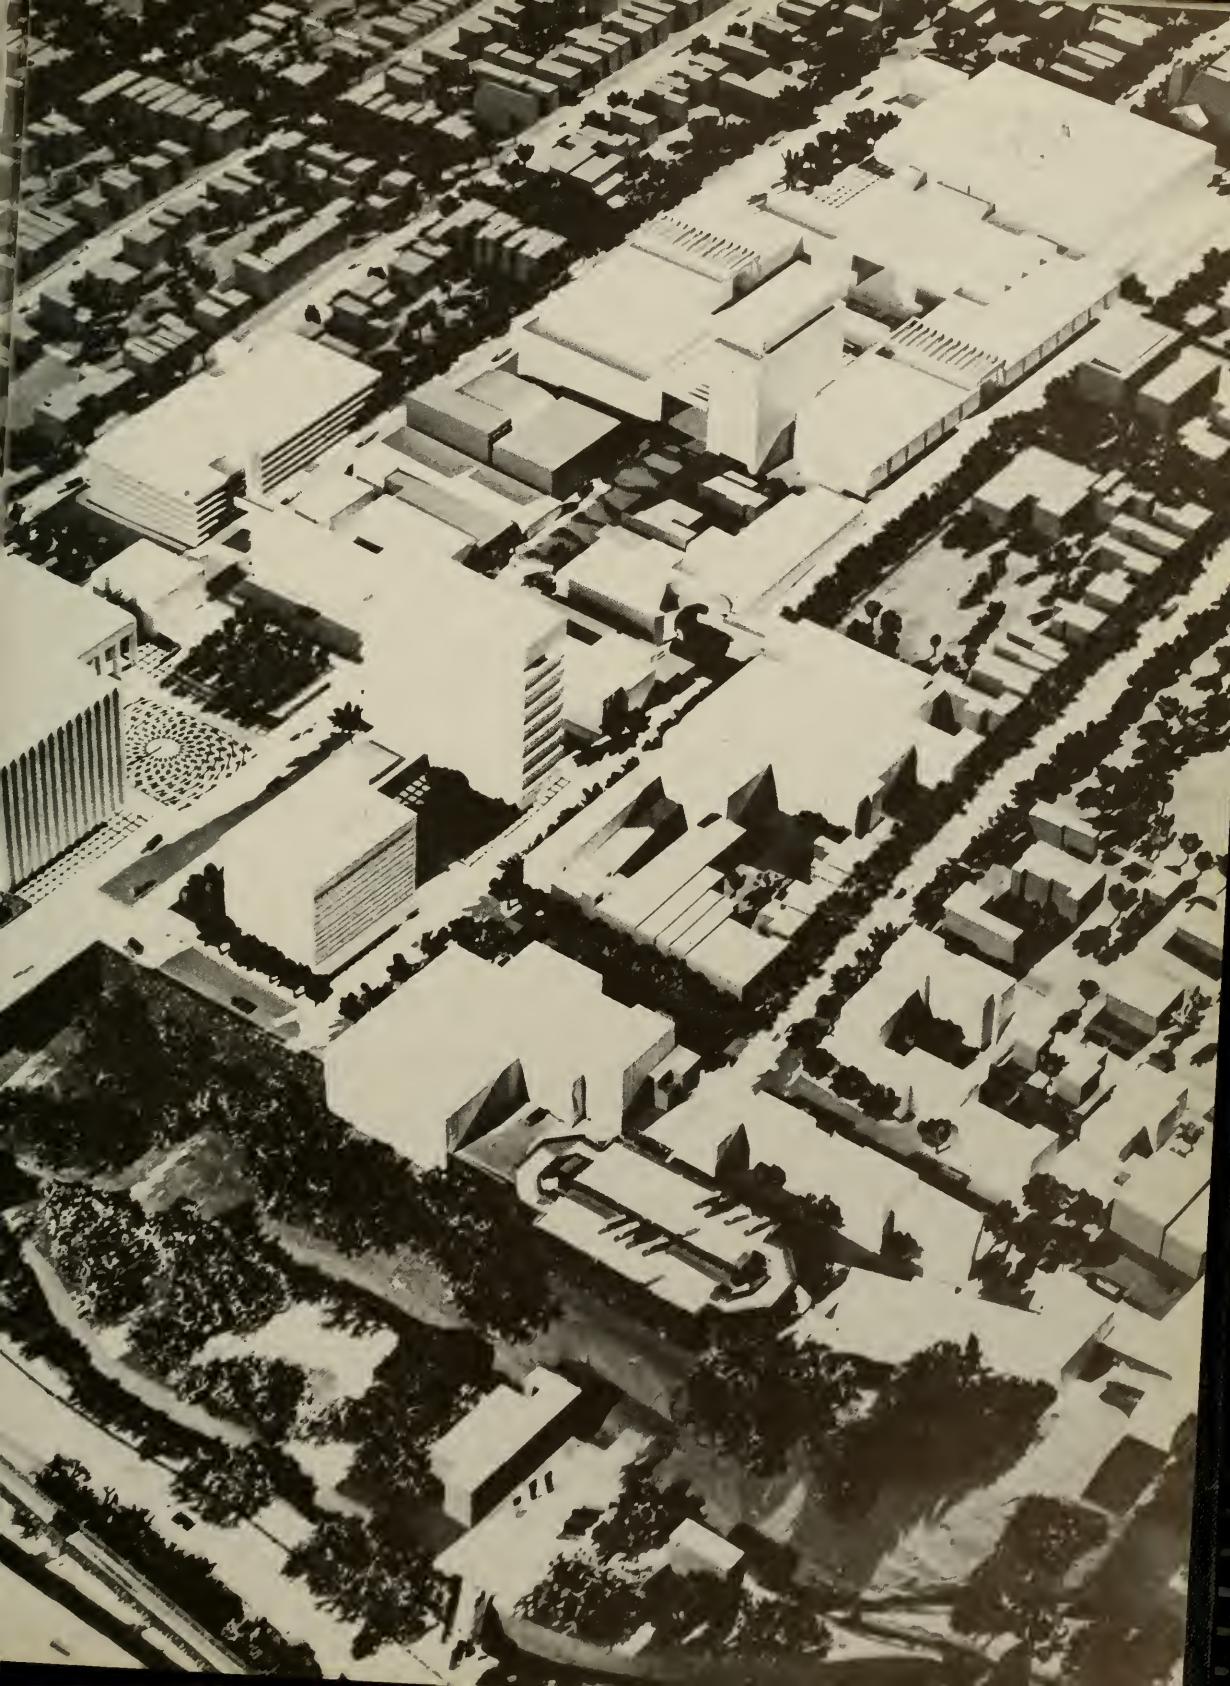

certainty. It is possible to offer an educated guess, but not to conjure up mystical revelations.

The future painted on the following pages is our guess of what the next 27 years hold. The year 2000 is chosen because it is far enough away to be significantly different from what is now; yet it is close enough to make forecasts of what will be.

This section is not intended, however, to supply all the answers. If it does not raise more intriguing questions than it solves, it will have failed its purpose.

Nor is this section intended as a detailed and unassailable blueprint for the future. What appears on the following pages is only a glimpse of what may be, and not necessarily of what will. Indeed we have learned all too often that fact is more spectacular than fancy.

With these considerations in mind, let us embark upon our journey . . .

Private colleges and universities are in trouble. Soaring labor and facilities costs have resulted in huge deficits for some private institutions and in skyrocketing tuitions and program cutbacks for nearly all.

Although Lehigh stands on firmer ground than most educational establishments, it is by no means certain that the University will survive to the year 2000.

What steps can Lehigh take to assure its continued existence? The answer is not a simple one. Lehigh's fate is tied very closely with the health of this nation's economy. It is difficult enough to project America's, and hence Lehigh's financial situation three years into the future; it is virtually im-

possible to forecast 27 years ahead.

Whatever the economic climate, certain factors will be crucial to the ensuing struggle. To survive Lehigh must remain competitive with industry in attracting qualified personnel. Industrious, imaginative and innovative leadership will be required to guide the University through to the millennium. It will not be an easy task.

Tuitions cannot rise faster than the cost of living forever without disastrous effects. To maintain high standards and high enrollment Lehigh will have to reduce the financial burden now resting on the student. New sources of income, particularly foundation and government monies, will have

to be tapped. It is not clear that even these will be sufficient.

Productivity must increase if Lehigh is to endure. Technological innovation can reduce the staggering cost of labor. More efficient use of space and time can stabilize operating costs. Matters of economy should not force Lehigh to cheapen its product, however. Lehigh's task will be to walk the fine line between high productivity and high quality.

The challenge is formidable, the outcome uncertain. Without government funding, many private institutions will fold. Lehigh, with a dedicated alumni body and a hard-headed but educationally sensitive administration will probably be able to ride out the storm.

America has an irrevocable commitment to continuing excellence in higher education. It is inconceivable that the state and federal governments will allow private universities to deteriorate for want of money.

By 2000, public support for private institutions will be commonplace. While outright government takeover is undesirable and unlikely, there are several intriguing schemes for limited public funding. The Pennsylvania State Board of Education has considered four: (1) grants to universities on a per degree or per student basis; (2) contracting colleges to train specific types of students such as doctors or engineers; (3) outright subsidies in amounts to be determined by the state legislature; and (4) increasing the scholarship monies available to students, thereby easing the burden on the institutions.

Most college administrators favor the latter course because it involves a minimum of state control. However, Lehigh may well be faced with the prospect of state and federal interference in the educational process such as standardization of curricula. If this be the price to pay for public support, Lehigh will have no choice but to live with it.

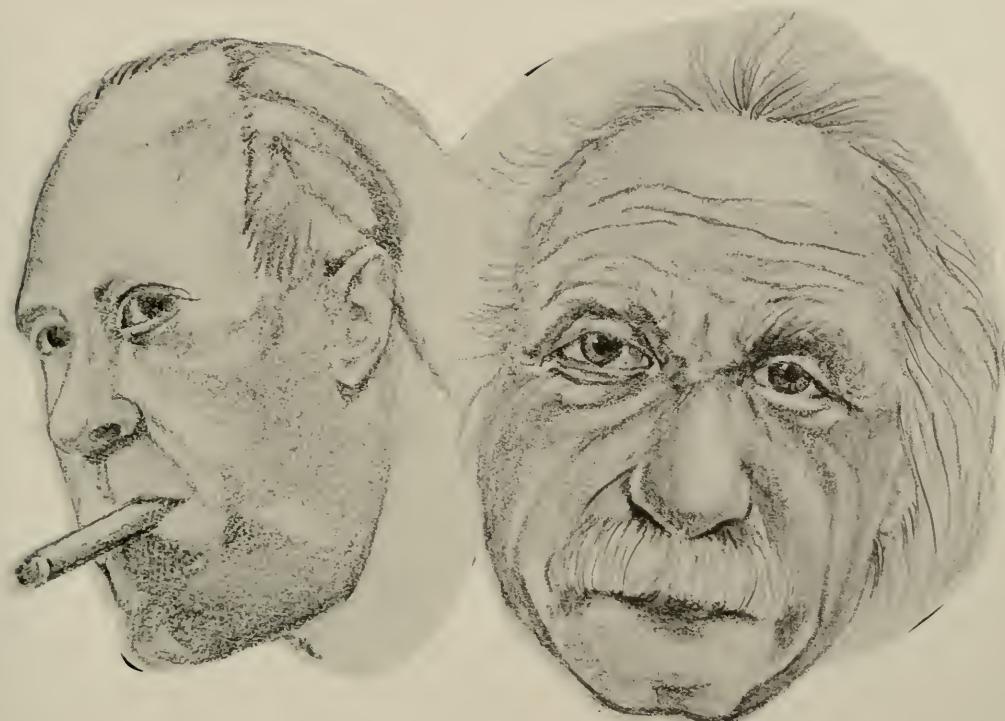

The educational program in 2000 will be the product of society's values and problems. It is therefore more worthwhile to ask what will be the concerns of our civilization 27 years hence than to try to pinpoint specific subjects that will be studied.

Technology will certainly be the dominating influence of the future. The task of higher education will be to assure that men are trained with sufficient insight and practical know-how to make technology work for the betterment rather than to the detriment of mankind.

This will require a much less specialized although perhaps a more prolonged education. It will no longer be sufficient to train engineers in integral calculus, computer languages and thermodynamics without courses which give insight into the proper application of that knowledge in a complex society. Nor will it be adequate for liberal arts students to become well-versed in history, philosophy and literature without a knowledge of how to make their information work to solve problems.

Education will have to reconcile the conceptual and practical aspects of man. By the year 2000, the problem identifiers and the problem solvers will be one and the same.

Picasso and Einstein—the artist and scientist as one.

Problems of our current era point to the need of broadening the objectives of education. The most important question facing doctors today are not particular diagnoses, but how society will provide adequate medical care to all its members. The most difficult decision of the civil engineer is not how to build a bridge, but whether the bridge should indeed be built. The most excruciating dilemma of the scientist is how to direct his energies to build rather than to destroy. The problem of our politicians is how to make effective decisions without an ability to comprehend the technical forces which shape society.

In the future, Lehigh will have to devote its energies to resolving these types of questions. A uniform education in the humanities and social sciences will be compulsory during the first two years so that students gain proper perspective on how to use their future skills. With technology becoming increasingly more complex, education will be extended for indefinite time periods so that students may fully master their liberal training and professional skills.

Rigid time requirements may be done away with altogether. Instead students will be allowed to remain in school until they intellectually saturate.

Education, like anything else, is the product of what preceded it. The teachers of the year 2000 will have been trained in today's colleges and universities, and will be resistant to changes in their values and techniques. Similarly, the alumni who will support Lehigh in 27 years will also be the products of 1973.

Nevertheless, there are forces which make drastic changes in the way students are taught inevitable. The first demand is economic. Universities will have to seek new technologies which increase the efficiency of the educational process.

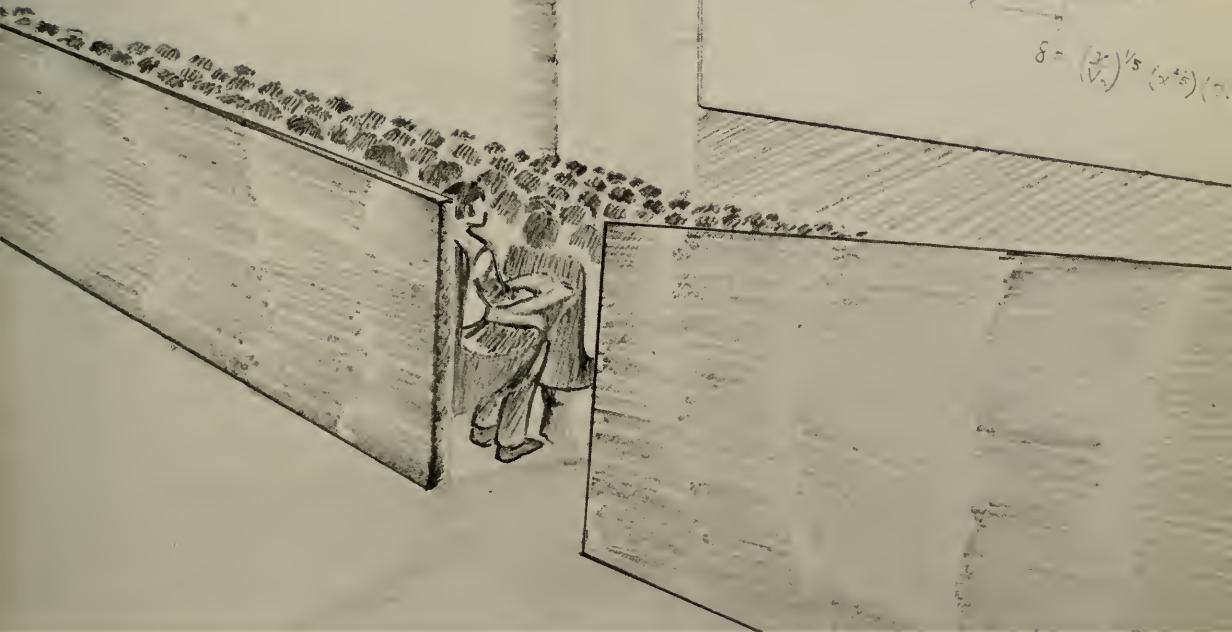

The second demand is access. Universities will simply not be able to accommodate everyone desiring its services in the future. Methods must be found to provide an education to all who need one, including those in the working force who need only specific skills.

The last force is personalization. Large lectures are taking an increasing proportion of the faculty's time and energy. Ways are being sought to free teachers from this responsibility so they can give more individualized attention to students.

$$\delta = (2/5) (V_0 x)^{1/5}$$

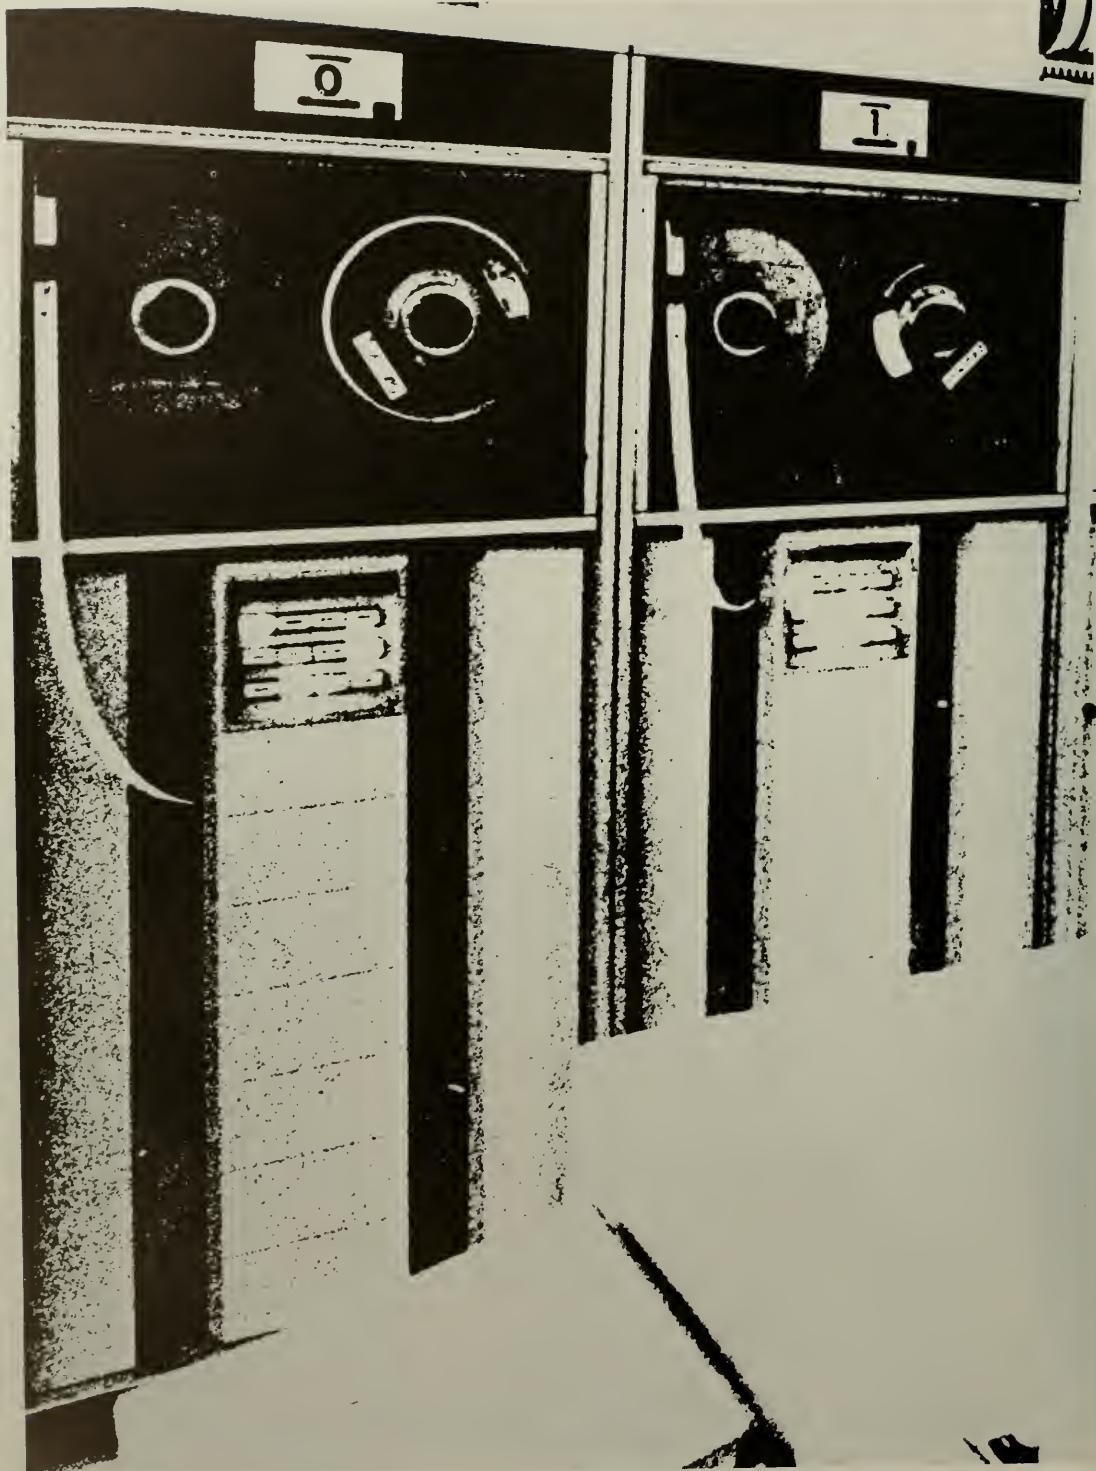

Video lectures provide one of the most feasible and popular means of freeing teachers and cutting costs. By 2000 students will view large lectures on a screen in an auditorium or on a picturephone in their rooms. The professor need only deliver his lectures once, with updates each year, instead of being forced to repeat his routine day after day, year after year, as he does now.

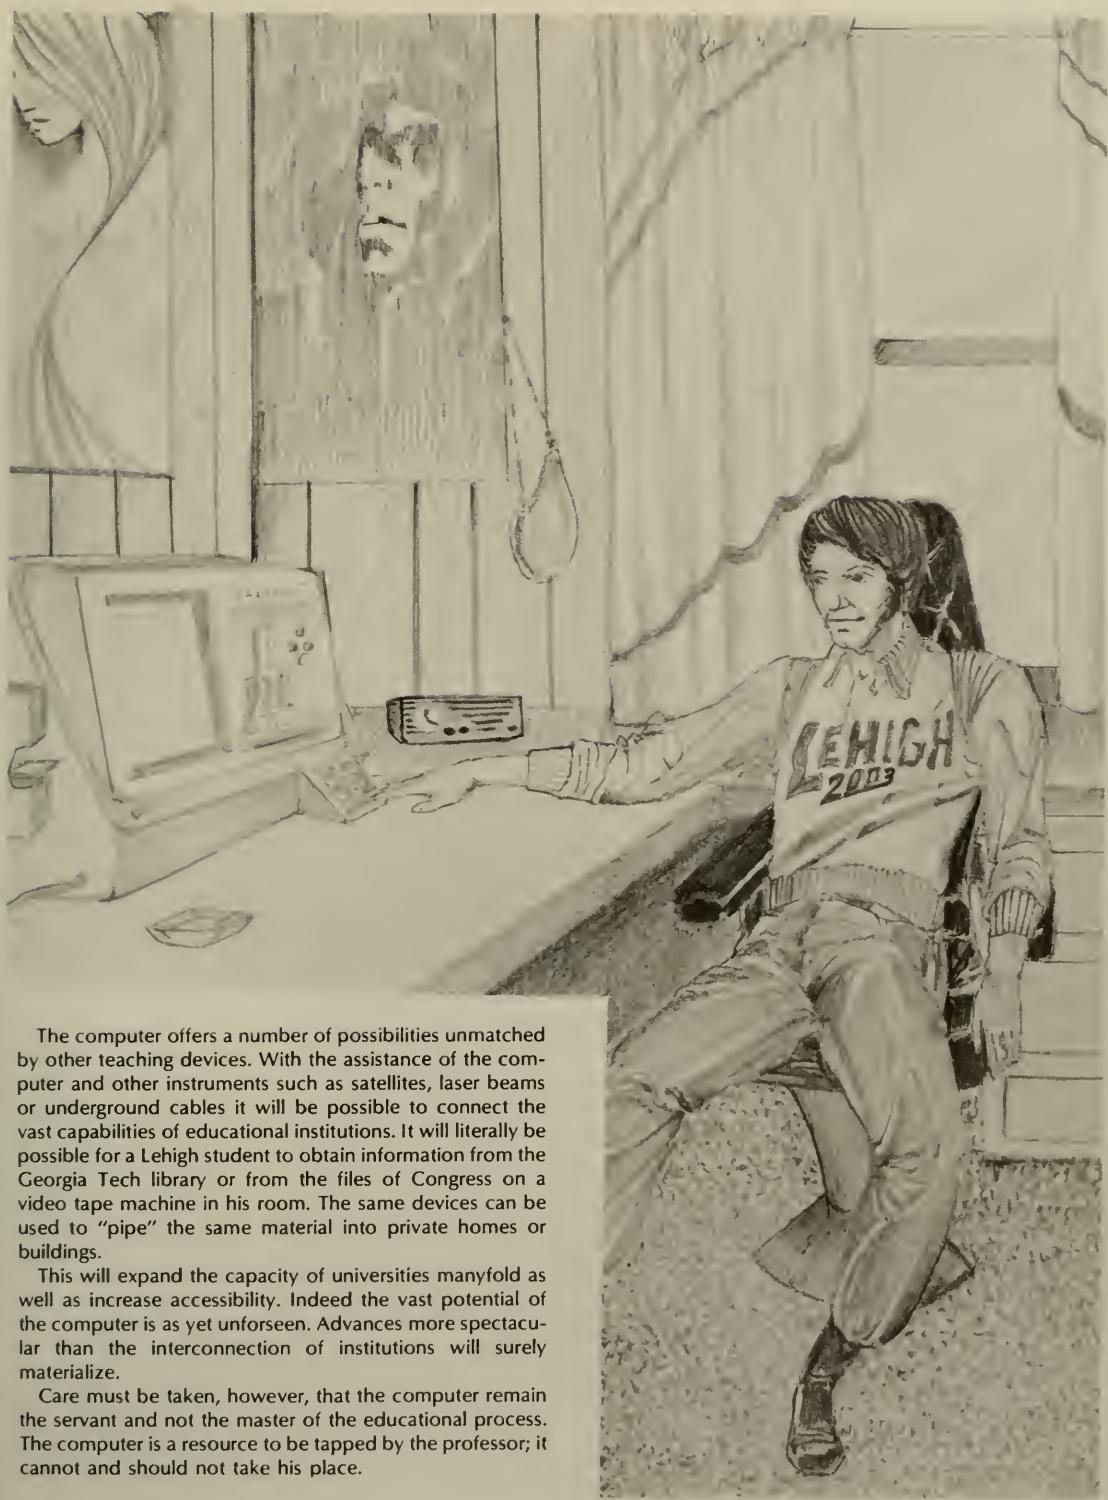

The success of videotape depends upon two factors. It requires a considerable amount of self-discipline on the part of students. There is great danger of the student losing his attentiveness during a video lecture although this same problem exists in mass lectures today. On the other hand, video tape affords the student unlimited opportunity to re-

view a lecture so that he can resolve a thorny question or make up missed work.

Video lectures must also be reinforced by extensive student-faculty contact outside the classroom. Free from the burden of lecturing, the professor should be able to adequately monitor the progress of each student, and to devote personalized attention to the student's individual needs and problems.

Significantly, T.V. lectures and other video productions are already gaining foothold. They will undoubtedly be invaluable educational tools in the future.

The computer offers a number of possibilities unmatched by other teaching devices. With the assistance of the computer and other instruments such as satellites, laser beams or underground cables it will be possible to connect the vast capabilities of educational institutions. It will literally be possible for a Lehigh student to obtain information from the Georgia Tech library or from the files of Congress on a video tape machine in his room. The same devices can be used to "pipe" the same material into private homes or buildings.

This will expand the capacity of universities manyfold as well as increase accessibility. Indeed the vast potential of the computer is as yet unforeseen. Advances more spectacular than the interconnection of institutions will surely materialize.

Care must be taken, however, that the computer remain the servant and not the master of the educational process. The computer is a resource to be tapped by the professor; it cannot and should not take his place.

Knowledge, if it can be quantified, is doubling every ten years. Space considerations will soon make it impossible to transcribe and store information by traditional methods. Miniaturization is becoming more and more popular in colleges today to alleviate overcrowding in libraries. Microcards and microfilm will undoubtedly replace books as the warehouses of information by the year 2000.

The degree to which miniaturization can be accomplished is amazing. Recently, a 20,000 volume library compiled by the Encyclopedia Britannica was reduced to a three inch by five inch microfiche. Further reductions are still possible.

Microfilm, when combined with the computer and visual aids, bring entire libraries within grasp of a student. By 2000, students will be able to dial a number in their room, and have a microcard reference flash upon their picturephones.

The fact that mankind's knowledge is expanding so rapidly will have profound effects on the approach to education. In 27 years it will be virtually impossible for students to commit to memory the information that they will need. Any attempt to do so would certainly be overwhelming.

The best that can be hoped for is to train students in the proper means of obtaining information needed and in the proper methods to utilize this knowledge. Indeed this process has been developing in education for quite some time. By 2000, that process will be nearly complete. Basic background information will always be necessary; beyond that one cannot even begin to learn all one will need to know.

A hypothetical example underscores this sobering reality. It is already difficult for historians to develop expertise in the history of specific geographic areas during specific time periods. It is not really possible to learn "world history." Suppose by the year 2000 contact is made with intelligent life on another planet. The entire precepts and concepts of history will be changed. In such a case it would be futile to attempt to master history as an entity. At most the student can be taught the proper methods of dealing with historical questions, so that he may apply this method to specific historical problems.

Similarly startling developments in other fields will make it impossible to do more than scratch the surface of a subject. Education must therefore concentrate on research techniques and practical problem-solving methodology.

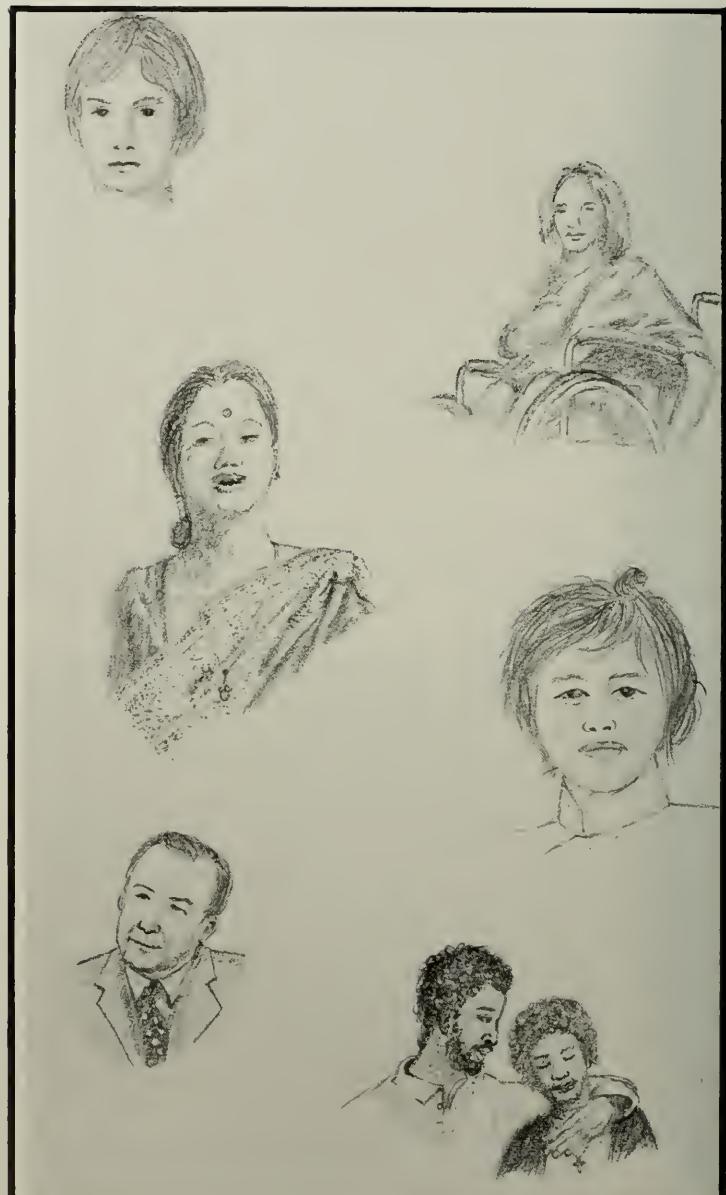

The boom in higher education as we know it will probably end during the 1980's. Population growth will slow and the percentage of men and women earning degrees will stabilize. Consequently, there will be only limited growth of what is known as the traditional college student body.

There will be a significant increase in the demands for the University from other sources, however. The abolition of the first grade, second grade, etc., system in primary and secondary schools will bring talented students as young as 14 years old to Lehigh. At the other end of the scale, the demand for continuing education—that is training men and women for specific skills after they have earned degrees—will increase the number of older people using Lehigh facilities.

In 27 years many, if not most of Lehigh's students will receive their education off campus. Technology will enable businessmen to acquire their skills at home. Professors will venture out to local residences to aid the underprivileged in the Lehigh Valley.

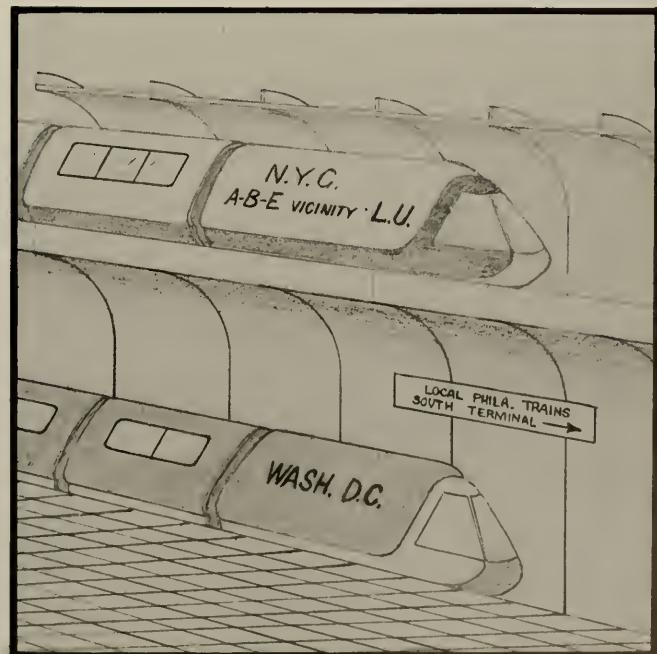

This is not to say that traditional campus life will disappear. On-campus education will remain a popular means, although no longer the only means, of earning a degree. Even the composition of the on-campus group is likely to change, however. Lehigh will respond to the needs of minority students, women and the aged. The student body will become much more culturally and scholastically diverse than at present. This heterogeneity will no doubt spell major changes in the academic and social environment.

By the year 2000 Bethlehem will be part of a sprawling megalopolis stretching from New York to Philadelphia. Mass transit will bring both cities within an hour of the Lehigh Valley. As a result, the entire area will take on a densely urbanized character.

This will have pronounced effects upon the campus. The North (academic) campus will become intensely developed and will blend with the urbanized city. It is hoped that Saucon Valley (South Campus) will retain its rurality—an island of green in an ever expanding metropolis.

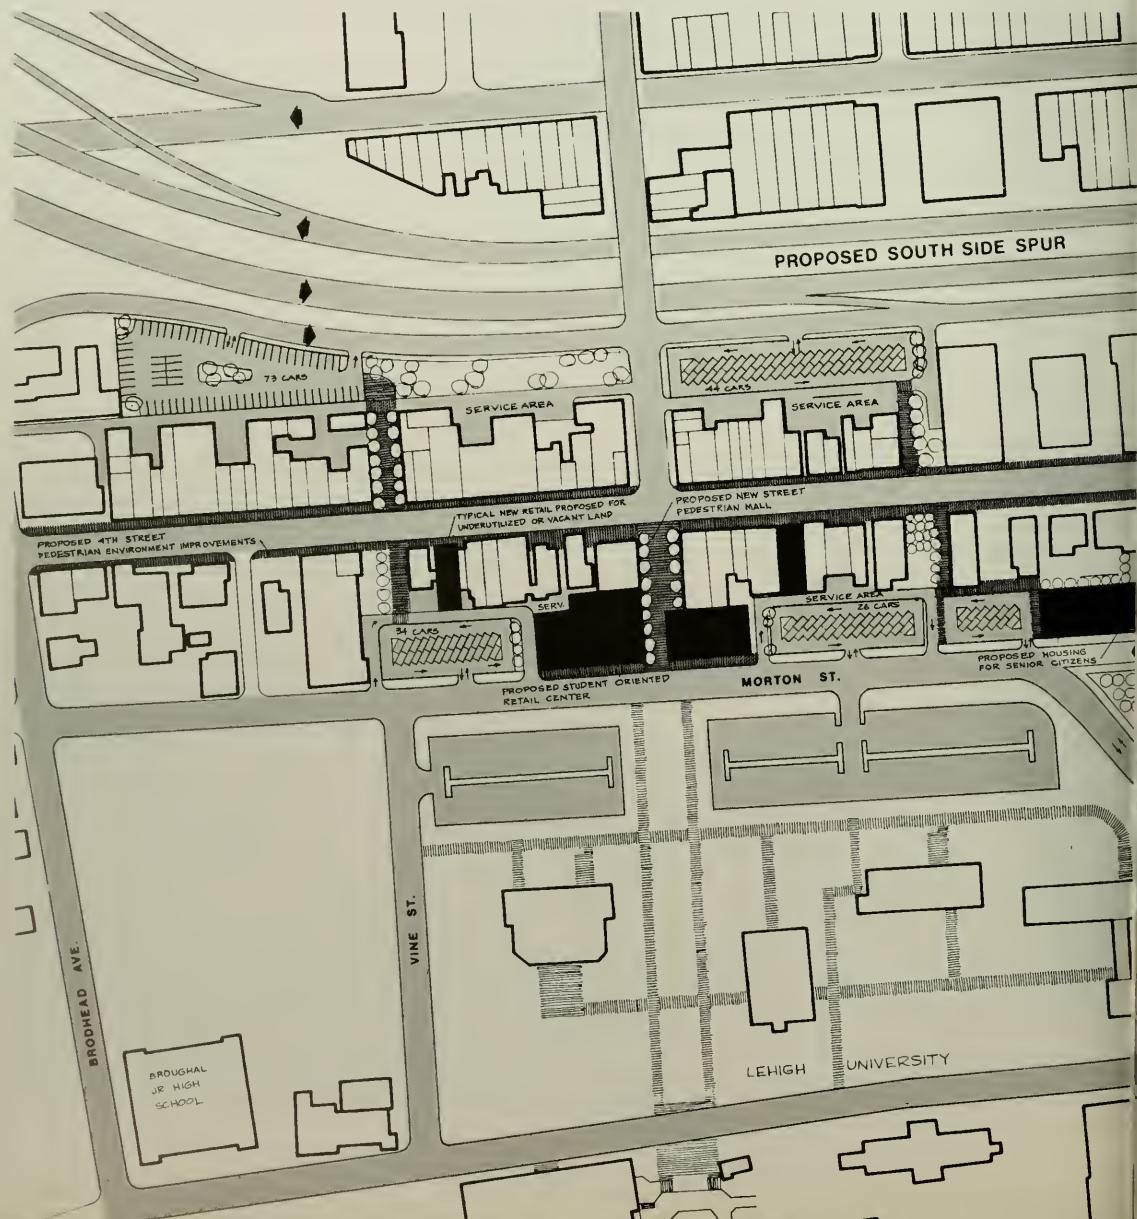

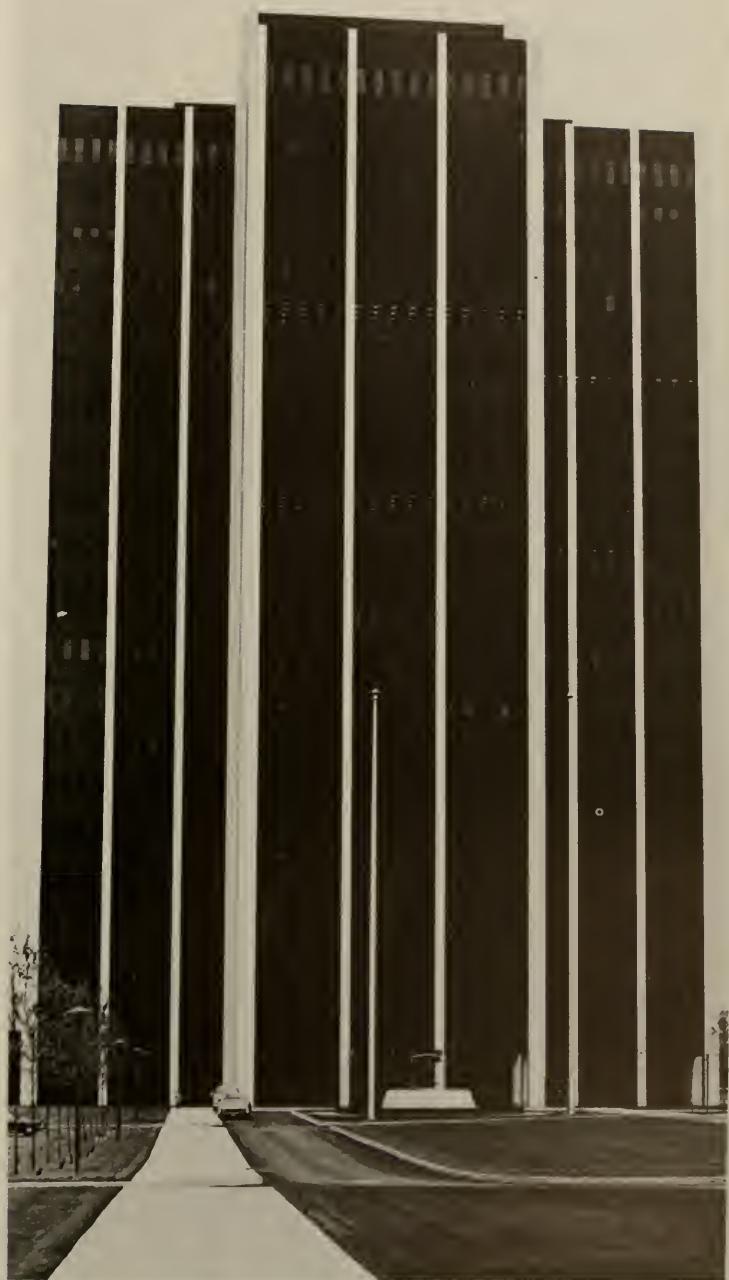

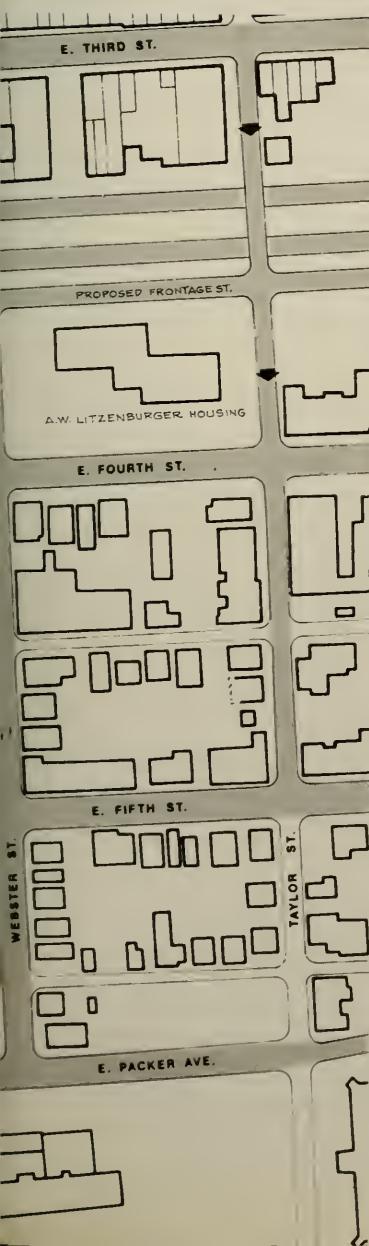

The renewal of Bethlehem's South Side is a vital project to the city, the University, and the steel company. Planners envision an extensive shopping mall on Fourth Street as the hub of the redevelopment effort.

The shopping center would serve students as well as Bethlehem Steel employees. The renovation and expansion of Route 22 or the construction of a new superhighway (Interstate 78) with connections to the South Side will make

the mall easily accessible to all residents of the Lehigh Valley.

Further business will be stimulated by increasing the population density of the area. High rise housing will increase the number of residents pumping money into South Side businesses. These new residents, many of whom will be students, coupled with other physical improvements should substantially revitalize the area.

## Development of Future Campus

Taylor Stadium torn down; High Rise Housing and parking deck built in its place.

Renovation and expansion of Freshman Quad adds 200 new dorm spaces and recreation facilities.

Science and engineering quadrangle in northeast corner of campus connected by underground tunnels.

Pedestrian archway spans Packer Avenue, a main thoroughfare by 2000.

Intensive development, possibly underground, of wooded area north of Alumni Building.

Expansion of Linderman Library extends to University Center.

Garden type apartments flourish in south corner of Saucon Valley.

Astronomical observatory erected in Sayre Park.

New Fieldhouse and stadium rejuvenate Lehigh's athletic programs.

All fraternities move on campus.

Palmer House site residence halls serve 200 students.

University buys land west of Brodhead Avenue into Warren Square for Professional Campus.

Multi-level parking deck on present Brodhead lot adds much needed space for autos.

Drama center purchased in town.

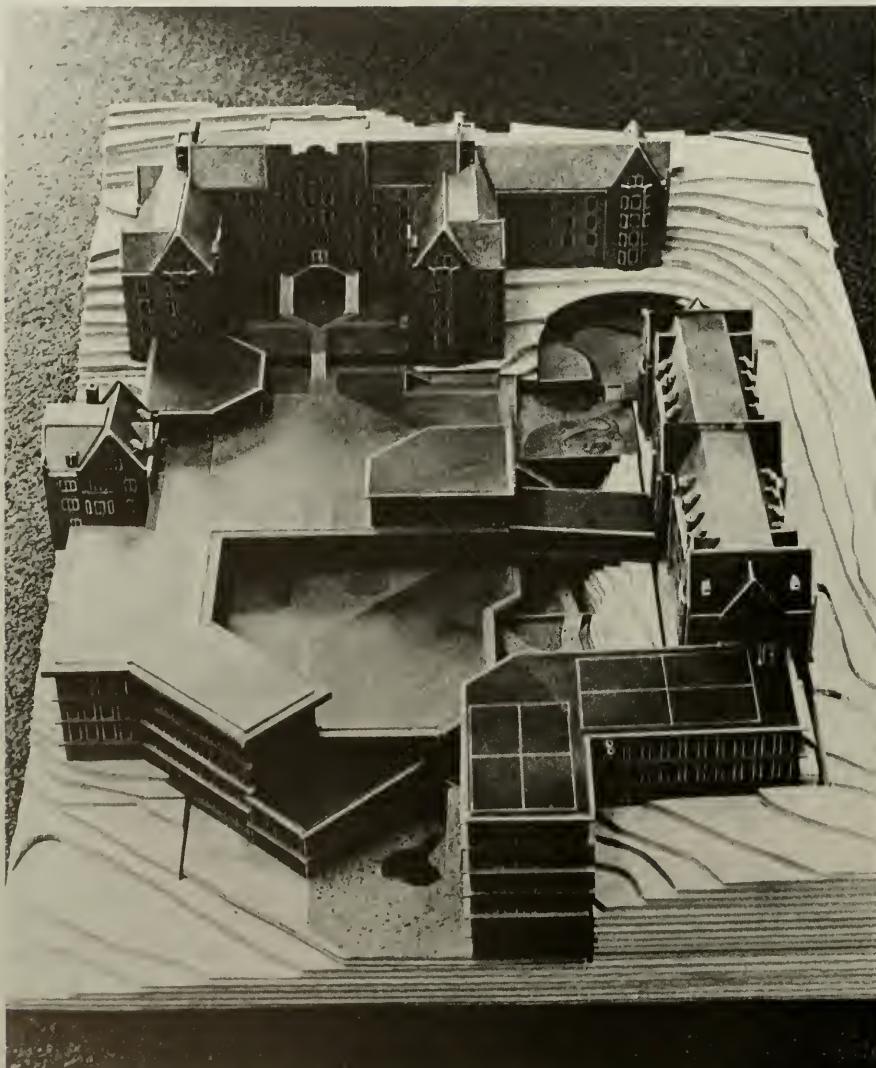

One of the major goals of campus planners is a completely pedestrian campus by the year 2000. Campus roads would be closed to all traffic except service vehicles. The major means of transport will revert to so primitive an instrument as the human foot.

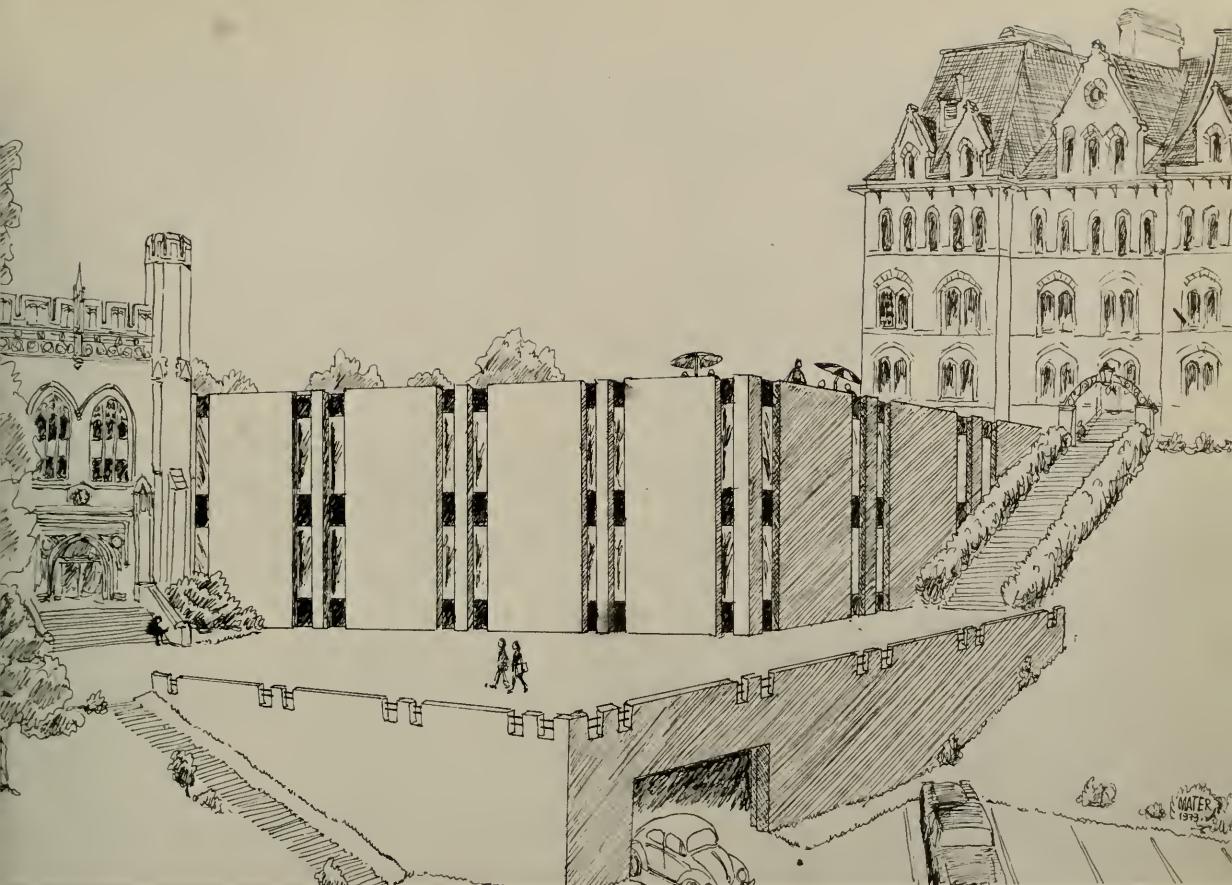

To expedite this goal, the University will close the Sayre Park gates. Entrance to the fraternities will flow through a road extending from Montclair Avenue west of Kappa Alpha.

There is also a possibility of closing Packer Avenue between Packard Laboratory and Christmas Saucon Hall. The New Street Mall would then be extended to the present vehicular entrance to the campus. If Packer Avenue is not closed, the city may widen it into a main thoroughfare con-

necting the east and west portions of Bethlehem's South Side. In that case a pedestrian bridge will be built arching the avenue to connect the newer campus to the traditional campus.

Cars are likely to remain a major means of transport out of town, however. Relaxation of restrictive motor vehicle regulations and the increased dependence on the automobile may exacerbate an already difficult parking problem. The construction of multi-leveled parking decks on the periphery of the campus will ease the situation as well as keep cars off campus. The present Brodhead parking lot and the Taylor Stadium site are prime targets for this sort of development.

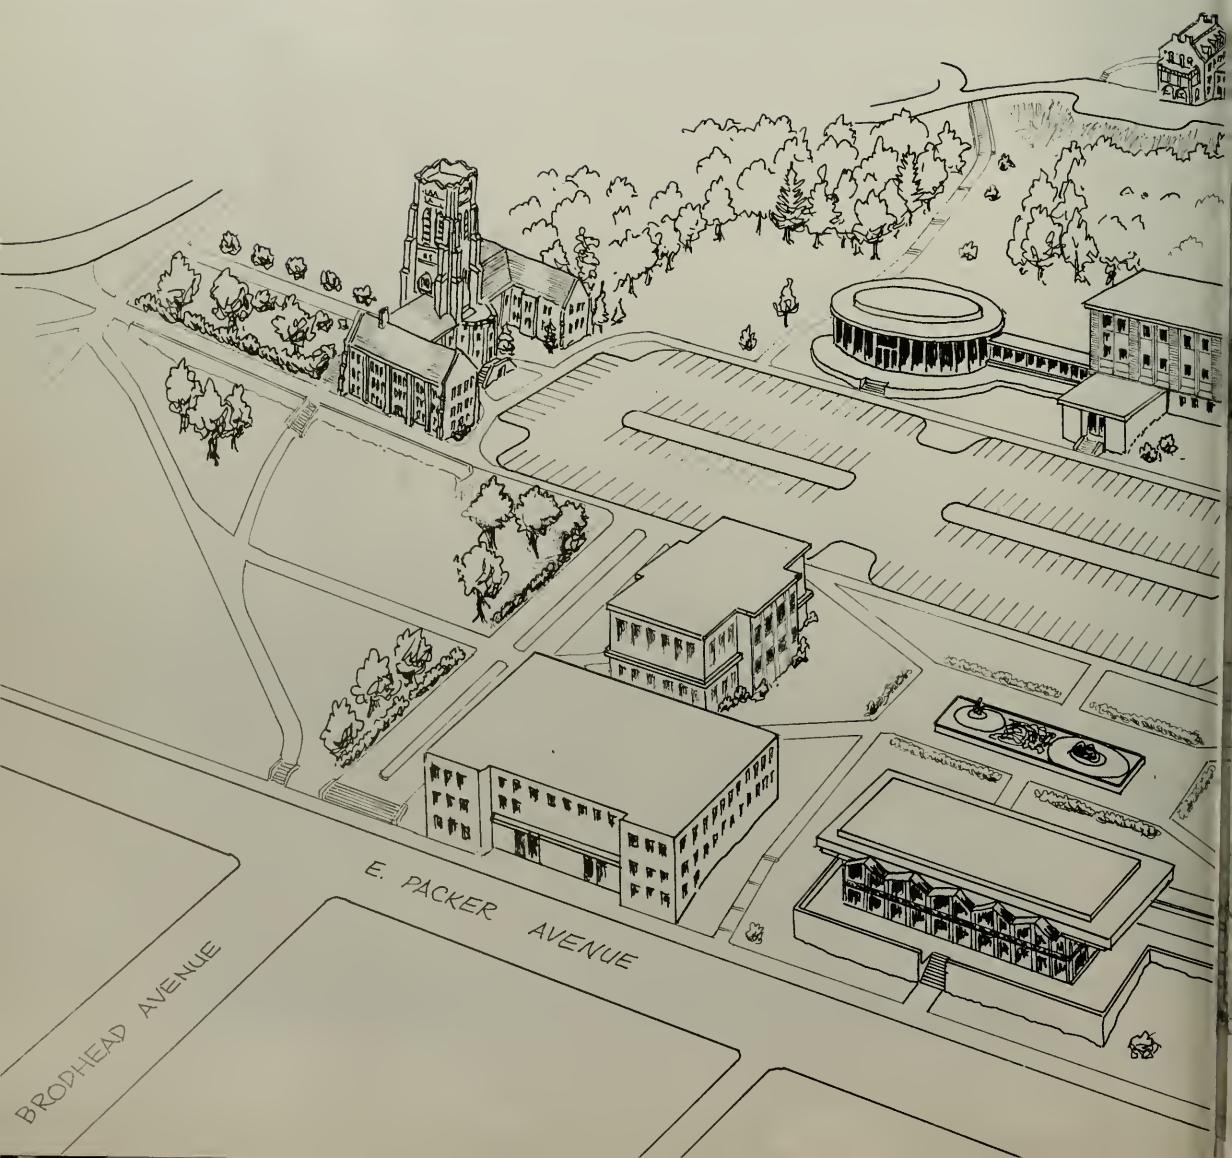

The academic campus will remain essentially the same size. Lehigh is planning only one further land acquisition, west of the Alumni Building into the Warren Square area.

With little room for expansion, the campus will become more and more intensely developed. It will become increasingly difficult to retain the natural beauty of the campus as the need for housing, laboratories, and parking facilities abounds. A possible solution to this dilemma is underground development. Some facilities, most notably library, storage, and parking, do not require windows and would lend themselves easily to this concept. A series of tunnels would connect existing buildings as well as a maze of structures beneath the surface. Underground development will allow for significant expansion without destroying the greenery which makes the present campus distinctive. It would also aid the pedestrian campus concept by providing sheltered walkways during inclement weather.

The sloped landscape also provides an opportunity for above surface intense development. Construction of multi-purpose, multi-level interconnecting buildings presents great opportunities. A proposal for a housing-recreation center (left) that would interconnect the freshman quad and provide dormitory space for 200 more people is already on the drawing boards. The center would also provide dining services and athletic facilities while the roof could be utilized as an area for recreational play.

This concept can also be used to link the Linderman Library to the University Center (above). An extension of the library to the ground level of the U.C. would add much needed stack space. The roof of the extension could be utilized as a porch for an outdoor cafe while an underground basement could serve for parking and storage.

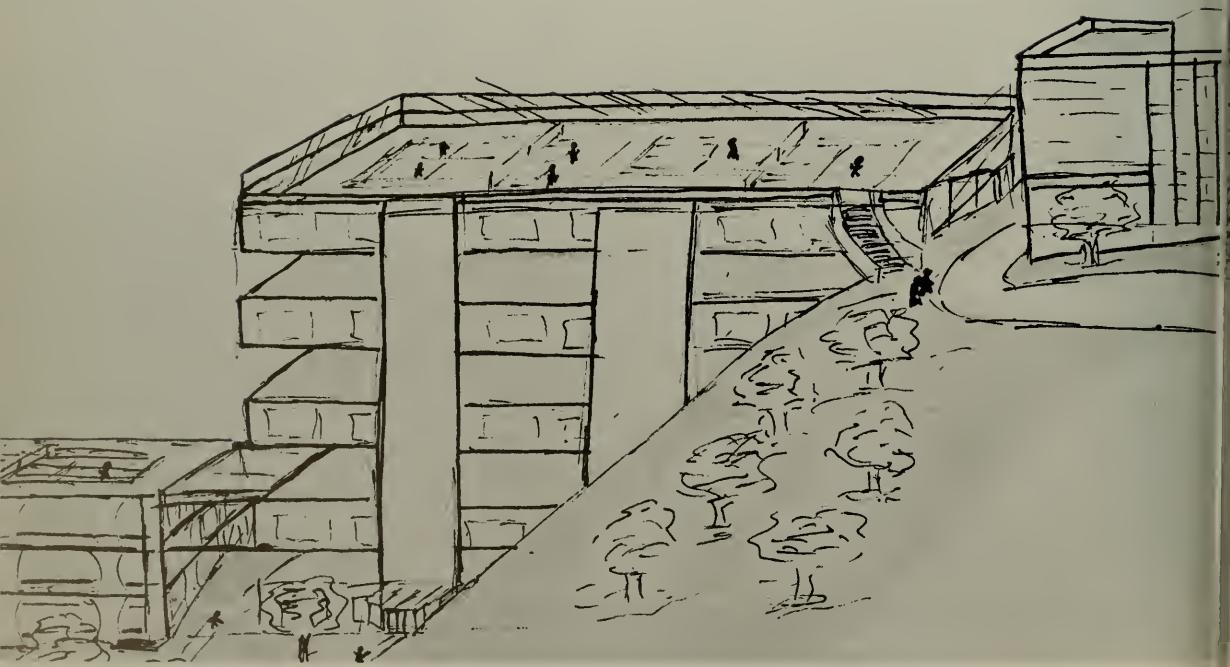

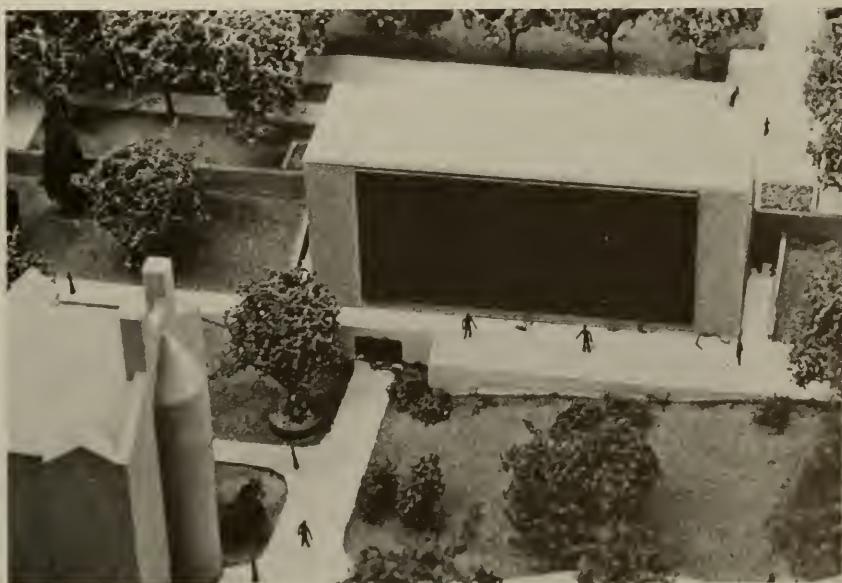

The fringes of the campus provide the last areas for totally new development. A science and engineering quadrangle, including the Mart Library, Sinclair, Whitaker, Fritz and Chandler Laboratories, the power house, physics building, and several new facilities will be connected via tunnel. All require spacious laboratory and auditorium facilities which limit the development in the area.

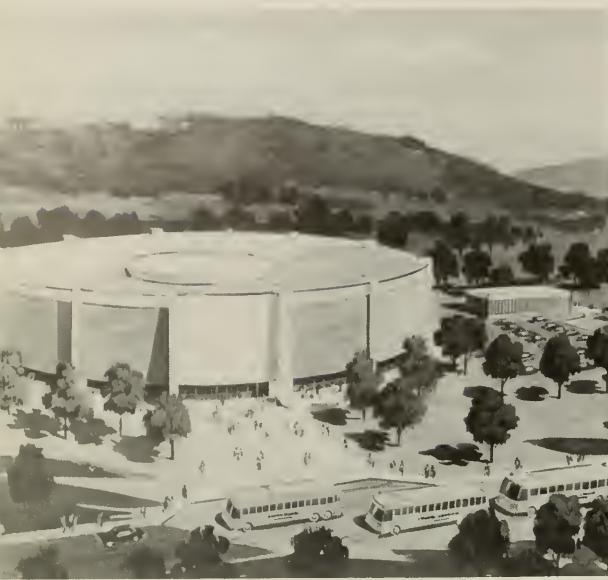

The area west of the Alumni Building stretching into Warren Square, not currently owned entirely by Lehigh, would provide a convenient spot and ample room for a professional campus—a law school, the business college and the school of education (left). Some of the existing housing would be preserved for use by married students and faculty. Other areas will serve for parking.

Taylor Stadium will be destroyed by 2000. Apartment type housing (see next page) with parking underground and tennis courts on the roof (ground level of the present Centennial II complex) would be most appropriate to this area.

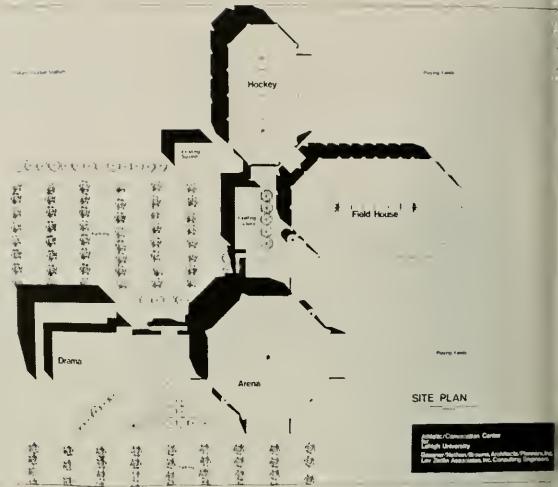

New buildings on campus will be strikingly different from the traditional gothic of modern brick edifices of the present. The coming decades will see intensely developed, high rise steel and glass structures which will reduce inflated construction costs and still be pleasing to the eye. The newly approved Mudd Chemistry Building (top) is a step in this direction. The Fairchild Physics Building will develop this concept still further (below).

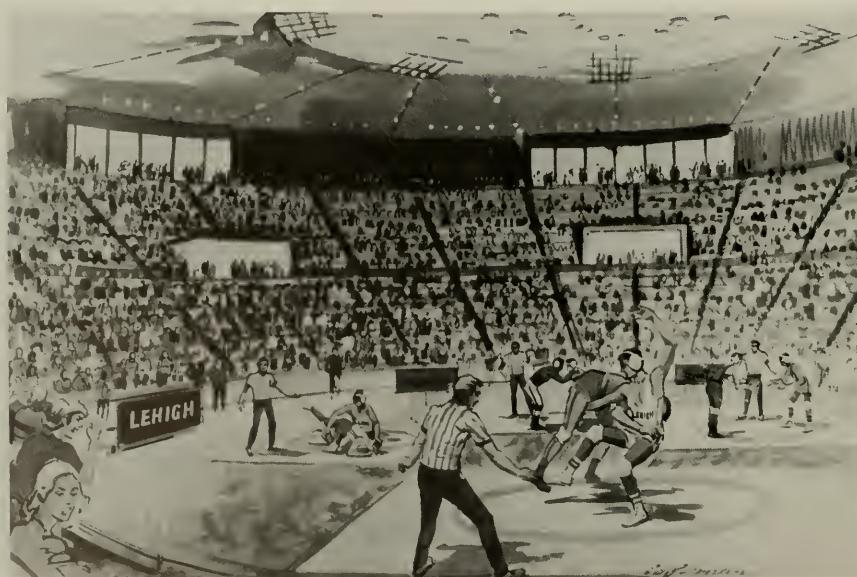

The development of Saucon Valley must be accomplished with extreme care so as not to disturb its rural nature. This will become particularly important with the construction of a sports complex, a stadium, and housing on the South Campus.

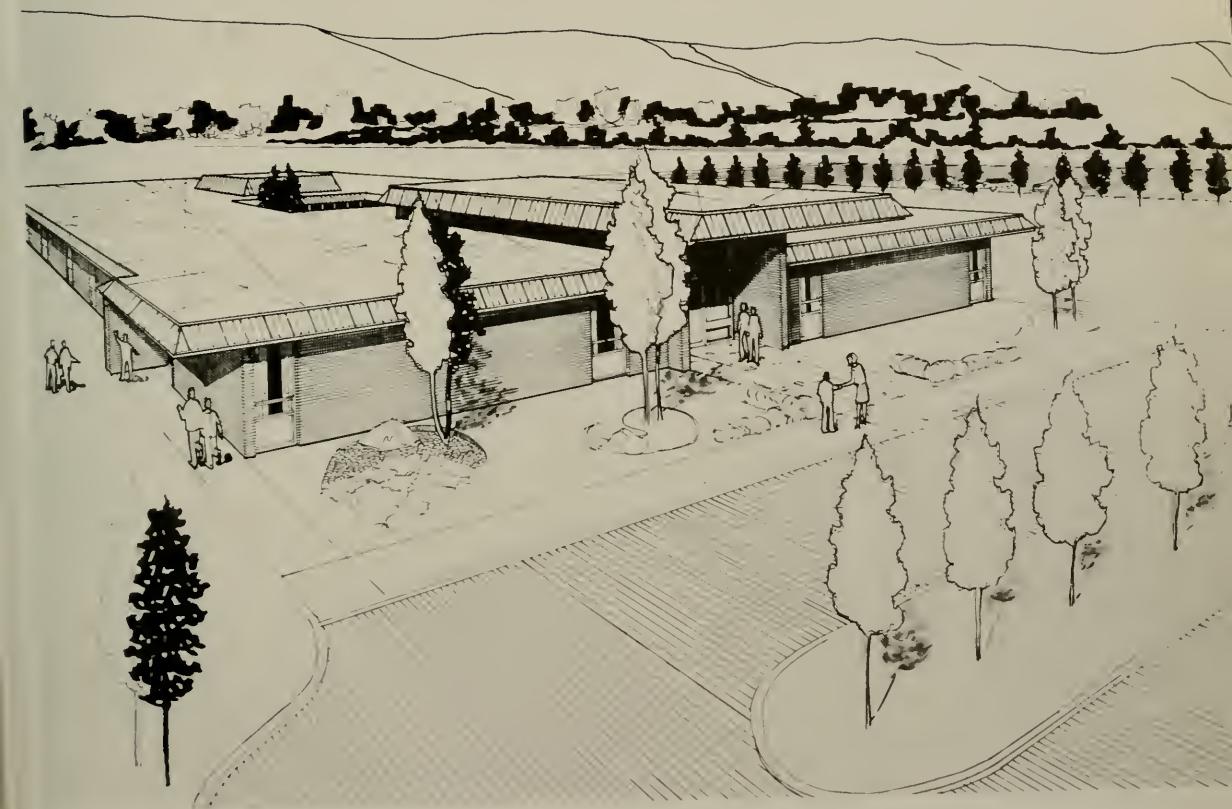

Great care is being taken to develop a fieldhouse which is aesthetically pleasing. An artist's conception of a single building structure and a layout of a multibuilding complex are shown above. Inside the building will be simply constructed but will greatly expand Lehigh's athletic capacity (below). A new stadium in the present bowl will provide seating capac-

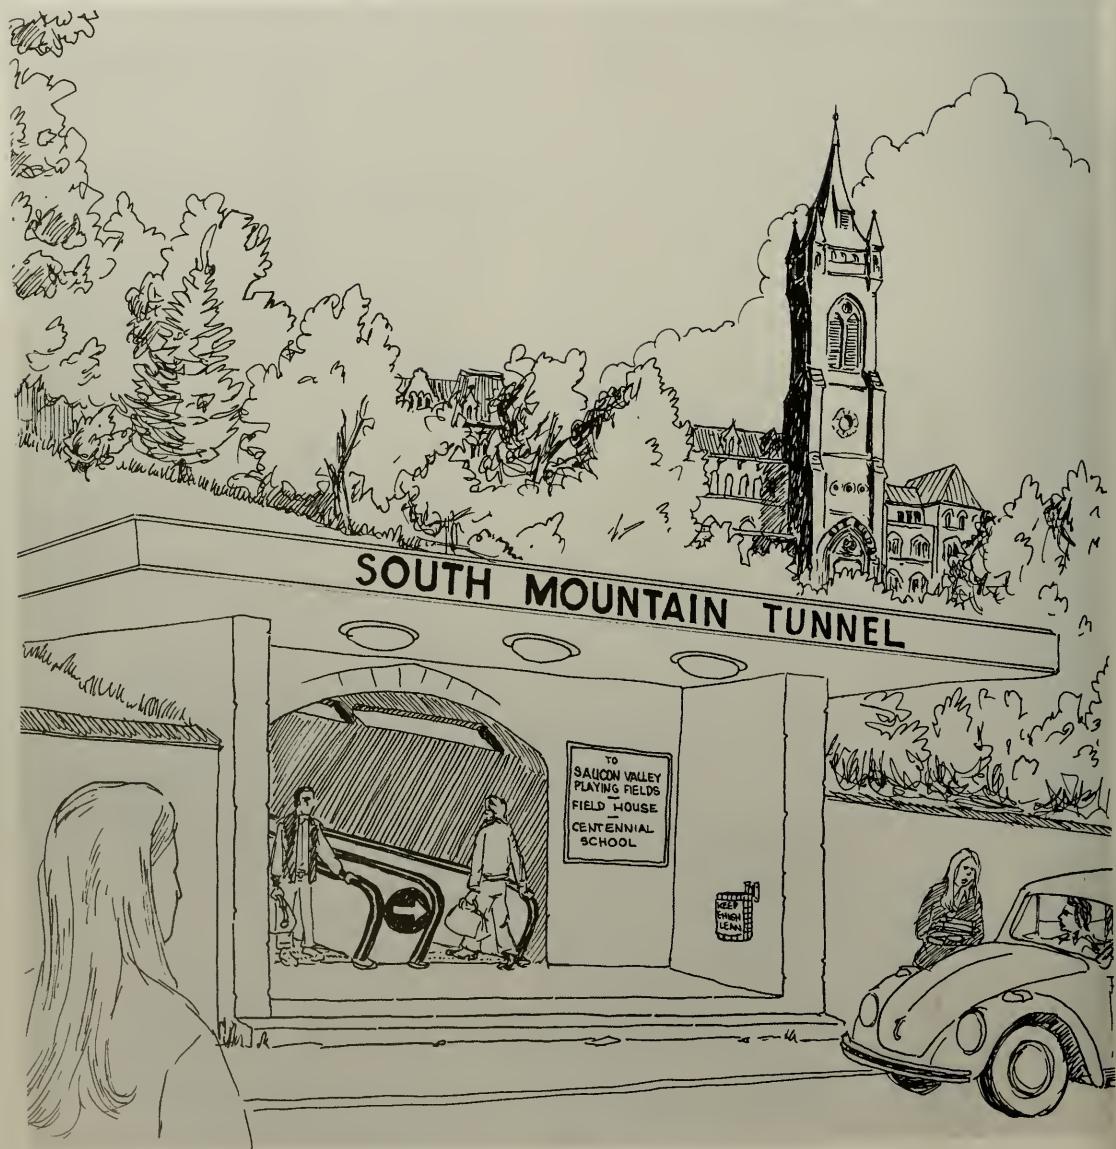

ity from 20,000 to 30,000. Its sunken construction will blend with the decor of the valley. One parking lot will serve both facilities, with an outside chance that costly underground lots will be built.

Housing will be built in the extreme south corner of the valley. It is expected that Saucon Valley's rural qualities will attract an ever greater number of undergraduate and graduate students, particularly as the North Campus becomes more urbanized. Saucon Valley would lend itself best to low level garden type apartments with exterior features similar to those of the Centennial School (right).

Transportation to and from Saucon Valley and the main campus is imperative if Lehigh is to develop both areas. Bus transport will provide a temporary answer to the problem. A more long-range solution envisions a monorail or escalator running either over or through the center of South Mountain.

Some of the developments outlined on the previous pages may never come to pass; many will. Still other ideas, some not even dreamed today, will be surprising reality in the year 2000.

Whatever the changes, however, the basic reasons for education will remain a constant. There will be transformations of form and format, but not of substance. The goals of the University have been the perpetuation of knowledge, the promotion of a free and open exchange of ideas, the spiritual development of the inner man, and the progressive development of all mankind. These basic purposes have survived and will continue to survive the centuries.

# HAROLD S. MOHLER SUCCEEDS MONROE J. RATHBONE AS PRESIDENT OF TRUSTEES

Monroe J. Rathbone

Harold S. Mohler

Harold S. Mohler, president of Hershey Foods Corporation, became the 9th Board of Trustees President in Lehigh's 109-year history in May of 1973.

Announcement of Mohler's election was made by Monroe J. Rathbone, president of the Lehigh Board for the past 16 years, who announced his plans to retire as president beginning with the May 25, 1973 board meeting. Rathbone will continue as a corporate trustee.

Mohler, a Lehigh alumnus and trustee, succeeds Rathbone, who also is a Lehigh alumnus, and who has served on the Lehigh board of trustees since 1948, including being president since 1957.

Lehigh has experienced its greatest progress, particularly financially, academically and physically, in its history under Rathbone's leadership as president of the trustees.

Rathbone said: "Lehigh University is indeed fortunate to have a man like Harold Mohler to undertake the presidency of the trustees at a very important time in the history of the institution. The current progress of the University must be maintained and accelerated, and with the cooperation of the board, alumni, faculty and students, Harold Mohler, a distinguished alumnus, is an excellent selection to accomplish this."

Now a resident of Baton Rouge, La., Rathbone is retired board chairman of Standard Oil Company (New Jersey), now Exxon Corporation. A native of Parkersburg, W. Va. and a former resident of Summit, N.J., he was graduated from Lehigh in 1921 with a chemical engineering degree.

Mohler, a resident of Hershey, Pa. and a native of Ephrata, Pa., earned his degree at Lehigh in industrial engineering in 1948.

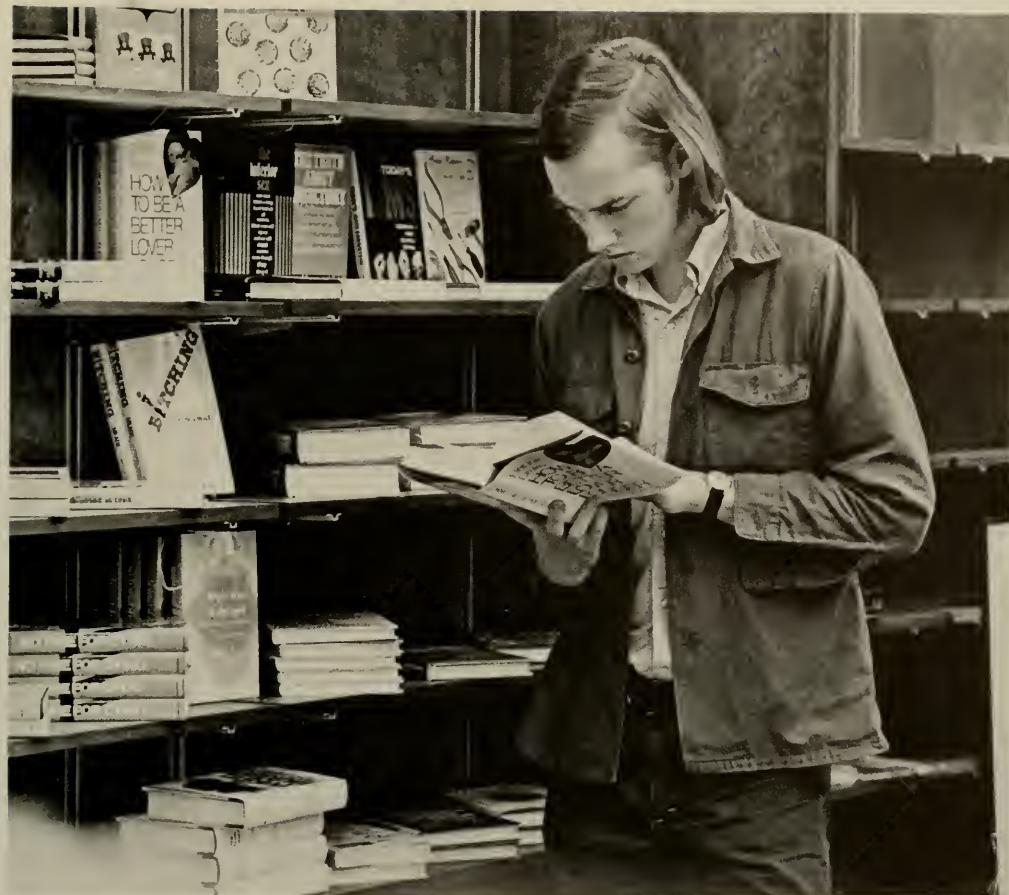

Both men have served as national president of the Lehigh Alumni Association. In 1948 Rathbone headed the organization, which has 50 clubs in this nation and 25,000 alumni around the world, while Mohler was president of the Association in 1970.

The two Lehigh alumni are active in numerous professional organizations and have served their Alma Mater in many volunteer positions, in addition to service on the board of trustees.

Rathbone was national chairman of Lehigh's successful \$22,000,000 Centennial Development Campaign which was concluded in 1966 with \$25-million.

Mohler is the national chairman of Lehigh's current \$67,000,000 New Century Fund, which was launched last April (1972) and has topped \$16-million in the first year of the nationwide effort.

The other presidents of the Lehigh board of trustees since the turn of the century were Eugene G. Grace, (1924-1956), a former chairman of the Bethlehem Steel Corp.; Henry R. Price, (1912-1924), then a New York City eye surgeon; William A. Lathrop, (1905-1912), former president of Lehigh Navigation & Coal Co.; and Robert H. Sayre, (1897-1905), a former Lehigh Valley Railroad officer. The 4 men are all deceased.

## Days of Future Nostalgia

1972-73 was a year of nostalgia, though oddly enough, it was nostalgia for the 1950's, the era of the greasers, when most Lehigh students weren't past kindergarten.

Believe it or not, 1973 will be our future nostalgia (you know—those good old college days).

In the year 2000, read this page and uncover your past . . .

It was a year of ends . . . and beginnings . . .

IN THE WORLD, the Vietnam War ended (and the draft) . . . but there was Cambodia . . .

IN POLITICS, Nixon's last run for office, a landslide victory over McGovern . . . but there was Watergate.

IN SPACE, the last Apollo flight to the moon . . . but there was Skylab

ROCK was middle aged, but ran the gamut from A (America, Allmans, Alice Cooper) to Z (Zappa, Zeppelin (Led)) Do you remember Elton John, Carole King, David Bowie, the Grateful Dead, The Moody Blues, Mick Jagger, Helen Reddy, The Four Tops, Carly Simon, Paul Simon, Paul McCartney, Billy Paul . . . How about Sha Na Na . . .

SPORTS was supreme, the hairy A's (with Tenace), Bobby Riggs (in tennis), the Knicks, Dolphins, Canadiens, Walton, won big, the Russians beat us in basketball (did they?) violence at Munich . . .

Agnes . . . Kung Fu . . . Phase 3 . . . Rizzo . . . drinking age 18 in NJ . . . August classes . . . LB), HST die . . . Star Trek reruns . . . Kissinger . . . Deep Throat . . . LIFE's last issue . . . Archie Bunker . . . Greekers . . . Burt Reynolds centerfold . . . Superfly . . . Eagleton . . . tenure . . . Women's Lib . . . Secretariat . . . Ellsberg . . . POW's . . . Woody Allen . . .

AT LEHIGH, the class of '73 graduated . . . and

Aside from our many staff members, there is a small group of non-students without whom this yearbook never would have been completed.

A special thanks to Professor Robert Sullivan of the Journalism division secretaries Sue, Jane, and Gerri, patient Mike Gilroy or Bradbury-Keller publishers, and Dr. Pepper, so misunderstood.

## The Road Not Taken

Two roads diverged in a yellow wood,  
And sorry I could not travel both  
And be one traveler, long I stood  
And looked down one as far as I could  
To where it bent in the undergrowth;

Then took the other, as just as fair,  
And having perhaps the better claim,  
Because it was grassy and wanted wear;  
Though as for that the passing there  
Had worn them really about the same,

And both that morning equally lay  
In leaves no step had trodden black.  
Oh, I kept the first for another day!  
Yet knowing how way leads on to way,  
I doubted if I should ever come back.

I shall be telling this with a sigh  
Somewhere ages and ages hence:  
Two roads diverged in a wood, and I—  
I took the one less traveled by,  
And that has made all the difference.

—Robert Frost

This Has Been The 1973 Epitome
